

Global Gender Gap 2024

INSIGHT REPORT

JUNE 2024

Terms of Use and Disclaimer

The analysis presented in the Global Gender Gap Report 2024 (herein: "Report") is based on a methodology integrating the latest statistics from international organizations and a survey of executives.

The findings, interpretations and conclusions expressed in this work do not necessarily reflect the views of the World Economic Forum. The Report presents information and data that were compiled and/or collected by the World Economic Forum (all information and data referred herein as "Data"). Data in this Report is subject to change without notice. The terms country and nation as used in this Report do not in all cases refer to a territorial entity that is a state as understood by international law and practice. The terms cover well-defined, geographically self-contained economic areas that may not be states but for which statistical data are maintained on a separate and independent basis.

Although the World Economic Forum takes every reasonable step to ensure that the Data thus compiled and/or collected is accurately reflected in this Report, the World Economic Forum, its agents, officers and employees: (i) provide the Data "as is, as available" and without warranty of any kind, either express or implied, including, without limitation, warranties of merchantability, fitness for a particular purpose and non-infringement; (ii) make no representations, express or implied, as to the accuracy of the Data contained in this Report or its suitability for any particular purpose; (iii) accept no liability for any use of the said Data or reliance placed on it, in particular, for any interpretation, decisions, or actions based on the Data in this Report. Other parties may have ownership interests in some of the Data contained in this Report.

The World Economic Forum in no way represents or warrants that it owns or controls all rights in all Data, and the World Economic Forum will not be liable to users for any claims brought against users by third parties in connection with their use of any Data. The World Economic Forum, its agents, officers and employees do not endorse or in any respect warrant any third-party products or services by virtue of any Data, material or content referred to or included in this Report. Users shall not infringe upon the integrity of the Data and in particular shall refrain from any act of alteration of the Data that intentionally affects its nature or accuracy. If the Data is materially transformed by the user, this must be stated explicitly along with the required source citation. For Data compiled by parties other than the World Economic Forum, users must refer to these parties' terms of use, in particular concerning the attribution, distribution, and reproduction of the Data. When Data for which the World Economic Forum is the source (herein "World Economic Forum"), is distributed or reproduced, it must appear accurately and be attributed to the World Economic Forum. This source attribution requirement is attached to any use of Data, whether obtained directly from the World Economic Forum or from a user. Users who make World Economic Forum Data available to other users through any type of distribution or download environment agree to make reasonable efforts to communicate and promote compliance by their end users with these terms.

Users who intend to sell World Economic Forum Data as part of a database or as a stand-alone product must first obtain the permission from the World Economic Forum (CNES@weforum.org).

Preface

Saadia Zahidi
Managing Director

In 2024, gender parity inches slowly forward – the pace of travel is such, however, that full parity remains beyond the reach of another five generations. The journey to parity is longest for the economic and political dimensions of the index, with differing speeds of individual progress threatening to lower overall collective advancement. Despite this, since the index was launched in 2006, most economies have pressed forward. Globally, gender parity in economic and political spheres has improved significantly since the inception of the report, nearly doubling parity overall in senior leadership, ministerial, and parliamentary positions.

Government and business action have been crucial in advancing targets at the national and regional level; only the scale and stability of interventions remains insufficient in the face of current transformations. Economies cannot risk falling behind and throwing millions of women and girls back into times of strife and need. Big lifts in economic gender parity are needed to ensure that women have unfettered access to resources, opportunities and decision-making positions. Governments are called on to expand and strengthen the framework conditions needed for business and civil society to work together in making gender parity an economic imperative – one that fulfills the most basic of needs and inspires the very edges of innovation.

At the World Economic Forum, the Centre for the New Economy and Society engages leading representatives of government, business and international civil society in shaping prosperous, resilient and equitable economies and societies. Since 2012, the Gender Parity Accelerators have worked towards gender parity in economic participation – scaling policies and strategies to improve women's representation in the workforce and in leadership – as well as pay equity. Accelerators are currently present in 16 countries in Latin America and the Caribbean, the Middle East and North Africa, Central Asia, East Asia and the Pacific, and Sub-Saharan Africa. Focusing on corporate action, the Diversity, Equity and Inclusion (DEI) Lighthouse Programme brings together a cross-industry group of organizations taking action

to drive better and faster DEI outcomes through CEO leadership, and knowledge-sharing on initiatives that have achieved significant, quantifiable and sustained impact for underrepresented groups. At the frontier of thought leadership, the Global Future Council on the Future of the Care Economy explores possibilities for a well-functioning care economy, raising the profile of the care economy as an economic and investment priority for leaders worldwide.

This year's edition of the *Global Gender Gap Report* continues to track gender gaps in key labour market outcomes and explores new dimensions underlying these gaps. We are grateful to LinkedIn, Coursera and PwC for their collaboration in providing unique data and new measures to offer novel insights into unfolding dynamics. We also thank the members of the Centre for the New Economy and Society Advisory Board for their leadership, the over 190 partners of the Centre, and the Global Future Council on the Future of the Care Economy and Community of Chief Diversity and Inclusion Officers for expert guidance, as well as a network of national ministries of economy, education and labour for their commitment to advancing gender parity.

We would like to express our gratitude to Silja Baller, Kusum Kali Pal, and Kim Piaget for their leadership of this project. We would also like to thank our colleagues Mauricio Baez-Sedeno, Attilio Di Battista, Eoin O'Cathasaigh, Julia Hakspiel, Kateryna Karusnka, Ricky Li, Dorsey Lockhart and Ignacio Moreno for their support.

Parity can come within grasp, but it requires decisive leadership and dedicated resources. At this year's Annual Meeting in Davos, the Forum launched the Global Gender Parity Sprint, bringing together governments, businesses, international organizations and other stakeholders for a six-year sprint on the road to parity – to mobilize action, exchange insights, foster partnerships and combine forces to accelerate economic gender parity and deliver economic transformation, innovation and growth. Let us harness this pivotal moment to drive investment and innovation to advance equality of opportunity, making a gender equal world a lived reality for all.

Key Findings

The Global Gender Gap Index annually benchmarks the current state and evolution of gender parity across four key dimensions: Economic Participation and Opportunity, Educational Attainment, Health and Survival, and Political Empowerment. Since launching in 2006, it is the longest-standing index tracking the progress of numerous economies' efforts towards closing these gaps over time.

This year, the 18th edition of the Global Gender Gap Index benchmarks gender parity across 146 economies, providing a basis for the analysis of gender parity developments across two-thirds of the world's economies. Further, the index examines a subset of 101 countries that have been included in every edition of the index since 2006, offering a broad country sample for longitudinal and trend analysis. The Global Gender Gap Index measures scores on a 0-100 scale and scores can be interpreted as the distance covered towards parity (i.e. the percentage of the gender gap that has been closed). Cross-country comparisons support the identification of the most effective policies to close gender gaps.

Key findings include the index results in 2024, trend analysis of the trajectory towards parity and in-depth examination of historical and emerging patterns through new metrics partnerships and contextual data.

Global results and time to parity

The global gender gap score in 2024 for all 146 countries included in this edition stands at 68.5% closed. Compared against the constant sample of 143 countries included in last year's edition, the global gender gap has been closed by a further +.1 percentage point, from 68.5% to 68.6%. When considering the 101 countries covered continuously from 2006 to 2024, the gap has also improved +.1 points and reached 68.6%.

The lack of meaningful, widespread change since the last edition effectively slows down the rate of progress to attain parity. Based on current data, it will take 134 years to reach full parity – roughly five generations beyond the 2030 Sustainable Development Goal (SDG) target. In addition:

- The 2024 Global Gender Gap Index shows that while no country has achieved full gender parity, 97% of the economies included in this edition have closed more than 60% of their gap, compared to 85% in 2006.

- Iceland (93.5%) is again ranked 1st and has been leading the index for a decade and a half. It also continues to be the only economy to have closed over 90% of its gender gap. Out of the remaining nine economies in the top 10, eight have closed over 80% of their gap.
- European economies occupy seven spots out of the global top 10. In addition to Iceland, these include Finland (2nd, 87.5%), Norway (3rd, 87.5%), Sweden (5th, 81.6%), Germany (7th, 81%), Ireland (9th, 80.2%) and Spain (10th, 79.7%). The remaining three spots are occupied by economies from Eastern Asia and the Pacific (New Zealand, 4th, 83.5%), Latin America and the Caribbean (Nicaragua, 6th, 81.1%), and Sub-Saharan Africa (Namibia, 8th, 80.5%). Lithuania (11th, 79.3%) and Belgium (12th, 79.3%) dropped out of the top 10, with Spain and Ireland climbing +8 and +2 ranks, respectively, to join the top performers in 2024.
- Among the 146 economies covered in the 2024 index, the Health and Survival gender gap has closed by 96%, the Educational Attainment gap by 94.9%, the Economic Participation and Opportunity gap by 60.5%, and the Political Empowerment gap by 22.5%.
- Since 2006, subindexes have shifted at different paces, based on the constant sample of 101 countries. Overall, the most significant shift occurs in Political Empowerment, where parity has jumped a total of 8.3 percentage points to 22.8% over the past 18 editions. In Economic Participation and Opportunity and Educational Attainment, parity has gained 4.8 and 4.2 percentage points respectively. Health and Survival is the only subindex where there has been a moderate decline from 2006 (-0.2 points).
- With the evolving pace of each individual subindex affecting their respective timelines to parity, results from this year have extended the wait for parity in Educational Attainment to 20 years (+4 years from 2023) and Political Empowerment to 169 years (+7 years from 2023), yet brought forth the timeline for Economic Participation and Opportunity to 152 years (-17 years from 2023). The time to close the Health and Survival gender gap remains undefined.

Regional results and time to parity

- **Europe** leads the 2024 regional gender gap rankings, having closed 75% of its gap in 2024, with an overall improvement of +6.2 percentage points since 2006. The top five European economies – Iceland, Finland, Norway, Sweden and Germany – all rank in the global top 10. However, while 21 out of the 40 economies in the region have closed over 75% of their gender gap, the distance between the top and bottom rank indicates broad intraregional disparities. Iceland, the highest-ranking, leads by 29 percentage points over Türkiye, which sits at the bottom. Europe shows modest gains in economic parity, with a slight uptick of +0.4 percentage points in its Economic Participation and Opportunity score (67.8%). The region's educational gender parity score is the third-highest (99.5%), globally, while health parity has stagnated. With an upwards trending curve, political parity in Europe has progressively scaled to the highest score among all regions in 2024 (36%).
- Ranked second, **Northern America** reports a gender parity score of 74.8%. Compared to other regions, however, the region has closed its regional gender gap by +4.3 percentage points since 2006. Despite leading in the Economic Participation and Opportunity subindex, its economic parity score has declined slightly to 76.3%, reflecting disparities in earned income and women's representation in senior leadership positions. Maintaining stability throughout editions, Northern America scores 100% in Educational Attainment and 96.9% in Health and Survival. In Political Empowerment, Northern America ranks third with a score of 26%, showing progress since 2006, yet also demonstrating persistent underrepresentation of women in ministerial and parliamentary positions.
- In third place is **Latin America and the Caribbean**, with a gender parity score of 74.2%. The region has made the biggest leap since 2006, reducing its overall gap by 8.3 percentage points. The region reached its highest economic parity score to date, of 65.7%, a slight uptick of +.5 percentage points from 2023, surging as a result of strong parity in labour-force participation and in professional roles. Educational Attainment and Health and Survival remain stable at 99.5% and 97.6%, respectively. While most economies show parity in literacy and education enrolment, disparities in access persist. At 34%, Latin America and the Caribbean has the second highest Political Empowerment score of all regions, having narrowed the gap by over 22.4 percentage points since 2006.
- **Eastern Asia and the Pacific** ranks fourth, with an overall gender parity score of 69.2%. While there's been a positive shift of +3.1 percentage points overall since 2006, only New Zealand and the Philippines have made the global top 10 since then. The Economic Participation and Opportunity score for the region is 71.7%, showing progress since 2023 but revealing significant disparities between countries in labour-force participation rates and workforce representation. The region's Educational Attainment gender parity score stands at 95.1%, reflecting gender gaps in literacy and enrolment levels. Health and Survival, despite a slight improvement, ranks last, at 95%, with some countries still lagging in healthy life expectancy and sex birth ratio parity. Political Empowerment has improved overall since 2006 (+3.4 percentage points), but its 2024 score of 14.5% ranks it third from the bottom against other regions.
- **Central Asia** ranks fifth out of eight regions with a score of 69.1%. Despite a slight regression in the parity score, there has been an overall improvement of +2.3 percentage points since 2006. Notably, all seven economies in Central Asia have achieved parity levels equal to or higher than 67%, with Armenia (72.1%), Georgia (71.6%), and Kazakhstan (71%) leading the region. With a 4.8 percentage-point difference between the highest and lowest performer, Central Asia is one of the most homogenous groupings. The region maintains near-parity status in Educational Attainment, the second highest score of all regions (99.6%), after Northern America (100%). However, the region saw regression in both economic and political parity: the 73.4% Economic Participation and Opportunity parity score is -0.6 points lower than in 2023, and the 12.8% Political Empowerment parity score declines by -1.6 percentage points.
- In sixth place is **Sub-Saharan Africa**, with a gender parity score of 68.4%. The region has advanced by an overall +5.6 percentage points since 2006. While 21 out of 35 economies are in the top 100, Namibia stands out as a top 10 performer. Over half of the countries in the region have closed over 70% of their gender gap; however, the top and bottom ranks are divided by 22.8 percentage points. Economic Participation and Opportunity stands at 68.1%, with progress in labour-force participation and positive results in technical and professional roles. Ranking last in Educational Attainment, Sub-Saharan Africa has the widest gap to close, with a score of 88.9%. Health and Survival stands at 97.1%, while Political Empowerment shows improvement at 22.6%, with notable strides in ministerial and parliamentary representation, particularly in Mozambique and South Africa.
- In 2024, **Southern Asia** ranks seventh, with a gender parity score of 63.7%, showing a variable trajectory throughout editions that has nonetheless resulted in a modest +3.9 percentage-point improvement since 2006. Six out of the seven economies in the region

rank below the top 100, and only six in the region have closed two-thirds of their gender gap. Southern Asia ranks last in Economic Participation and Opportunity. Its gender parity score of 38.8% communicates low labour-force participation rates for women and significant gender disparities in leadership roles. Educational Attainment scores 94.5%, having progressed by +13.4 percentage points since 2006, but retains substantive gender gaps in literacy and education, notably in Pakistan and Nepal. Health and Survival remains stable at 95.4%, while Political Empowerment sees a slight 0.7-point decline from 2023 to 26%, reflecting gender imbalances in ministerial and parliamentary representation across the region.

- **Middle East and North Africa** ranks last among all regions, with a gender parity score of 61.7%. Despite this result, the region has seen an overall positive trajectory since 2006, advancing its gender gap score by +3.9 percentage points. In Economic Participation and Opportunity, MENA countries rank 7th overall, with a score of 43.1%. Labour-force participation remains low in the region, but representation in professional roles is evolving positively. Educational Attainment has seen marked progress, with a score of 97.2%, and shows widespread gender parity in literacy and enrolment across levels of education. Health and Survival remains stable at 96.4%, with balanced sex ratios at birth but enduring gaps in healthy life expectancy. The region's performance in Political Empowerment in 2024 ranks lowest of all at 11.7%, although behind the figure is an +8.4 percentage-point increase in political parity since 2006, with increasing levels of women's representation in ministerial and parliamentary roles across economies.

Economic and leadership gaps: constraining growth and skewing transitions

- **Economic, political and business context:** The current global economic and regulatory context is shaping gender parity outcomes. A mixed economic outlook offers hints of short-term optimism, while predictions of long-term growth rates are at their lowest in 30 years. Economic prospects for women and girls are threatened by the continued downturns and prolonged crises. While the adoption of economic policies to advance gender equality has increased overall, across regions there are stark differences in not only adoption but also resourcing and implementation. Raising the required resources to close the gap requires a fundamental mindset to recognize gender parity as an engine for new, high-quality growth. Encouragingly, policy developments in the care economy signal growing recognition of the economic significance of caregiving. Business efforts to improve gender parity are

gaining momentum in Latin America, the Middle East, and East Asia. Where diversity, equity, and inclusion (DEI) efforts are longer lasting, the returns follow: increased productivity, adaptability to change and stronger innovation outcomes. Gender parity is a competitive advantage in an increasingly tough macro-economic and business environment.

- **Evolving gender gaps in the global labour market:** Parity in labour-force participation globally has continued to improve since last edition, rising beyond 2018 levels to reach 65.7% for the constant sample of economies tracked since 2006 – and standing at an aggregate score of 66.7% for those included in 2024 alone. Yet, regional variances continue to show that while women's workforce participation is recovering at the global level, parity advances at very different speeds across contexts. The sustainability of this trend, however, remains uncertain. Global unemployment is expected to rise in lower-income economies, and the jobs gap, a broader measure of those looking for work, also includes a disproportionate number of women.
- **Workforce representation and leadership:** In 2024, LinkedIn data shows that women's workforce representation remains below men's across nearly every industry and economy, with women accounting for 42% of the global workforce and 31.7% of senior leaders. Top-level positions remain narrowly accessible for women, globally speaking, illustrated by the global “drop to the top”: in 2024, the ascent from entry level to the C-suite is steeped in a 21.5 percentage-point difference in representation. While women are close to occupying nearly half of entry-level positions, they fall short of representing just one-quarter of C-suite roles. Hailed in past editions as a promising trend, women's hiring into leadership began to deteriorate, from 37.5% to 36.9% in 2023, and continued dropping in early 2024 to 36.4%, below 2021 levels. LinkedIn research indicates that worsening macro-economic conditions are linked to a decrease in hiring women into senior leadership roles. However, the higher women's representation in the workforce is, the greater the resilience to retrenchment during economic downturns.
- **Leadership representation in government:** In 2024, the largest global population in history is set to vote in over 60 national elections, including in major economies such as Bangladesh, Brazil, India, Indonesia, Mexico, Pakistan and the United States. Over the past 50 years, nearly half (47.2%) of economies tracked by the Global Gender Gap Index have had at least one woman in top political office. Gender parity in parliamentary representation reached a record high of 33% in 2024, nearly doubling since 2006 (18.8%). At the regional level, Latin America demonstrates continuous improvement over time.

- **The role of professional networks:** Gender parity in the workforce can be advanced through both formal measures like quotas and policies, as well as through informal factors such as professional networks. LinkedIn data suggests gender gaps in online professional networks lead to men typically having larger networks and stronger networks than women. Stronger networks are associated with increased probability of career progression and receive more recruiter outreach. However, one silver lining is that women have more “weak” ties, which have been linked to better career outcomes.
 - **The role of equitable care systems:** Women’s workforce participation is only just recovering from the recent surge in caregiving responsibilities, highlighting the urgent need for equitable care systems. Significant gaps exist between and within regions in terms of formal protections and provisions for parental leave, as well as perceptions of men’s and women’s participation in equal caregiving. However, attitudes and frameworks for care are evolving alongside the growing demand for broader care provision. In the past 50 years, the average number of maternity leave days have increased from 63 to 107, and paternity leave days have increased from less than a day to nine, on average. This is important as World Bank research has found that increased parity in leave allocations is positively correlated with higher female labour-force participation. Further actions are needed beyond childcare if workers are to be supported as informal caregivers and/or as formal care workers.
 - **Gender gaps skewing the technology transition:** According to LinkedIn data, women’s representation in both science, technology, engineering and mathematics (STEM) and non-STEM workforces has increased since 2016, yet women remain underrepresented in STEM roles, comprising only 28.2% of the STEM workforce compared to 47.3% in non-STEM sectors. The “drop to the top” from entry-level to C-suite positions is more pronounced in STEM occupations than in non-STEM roles. Women make up over half of the workforce base in non-STEM roles, compared to only a third in STEM. In turn, they make up a fourth of non-STEM leaders, and only over one-tenth in STEM. This gives women a double disadvantage with regards to technological and workforce transitions, as they continue to occupy the lower-growth, lower-paying jobs that are likely to be negatively affected in the short term.
 - **Gender gaps in AI talent:** Recent developments are more promising when it comes to AI talent specifically. As technology becomes increasingly central to business transformation, new LinkedIn data reveals that the concentration of female talent in AI engineering has more than doubled since 2016. While women still have a smaller industry presence than men, sectors like Technology, Information, and Media have seen significant increases in female AI talent. At the industry level, gender parity in AI industry representation has increased gradually in Education; Professional Services; Manufacturing; and Technology, Information and Media.
 - **Gender gaps in the skills of the future:** Gender differences in skilling profiles continue, skewing how men and women are engaging in the technological transition and the possibilities they have in the future of work. While men and women continue to showcase STEM skills disproportionately, the share of women with STEM skills has increased since 2016, from 24.4% to 27.1% in less than a decade. From an online learning perspective, Coursera data suggest that gender parity is highest in enrolments for the development of collaboration and leadership skills, teaching and mentoring, empathy and active listening, and leadership and social influence. However, gender parity in online skilling is currently too low in AI and big data (30%), programming (31%) and networks and cybersecurity (31%) courses to close existing workforce gaps.
 - **Gender gaps in perception of skills demand and opportunities to upskill:** Survey data from PwC reveals that a majority of male and female employees are actively seeking opportunities to expand their skillset, with most possessing a good understanding of how their job requirements will transform over the next five years. Gender differences, however, are evident in the perception of demand, given current roles, with women estimating digital, analytical, and green skills to be less important to their current career trajectories over the next five years. There is also a gender gap in perceived opportunities to acquire the skills of the future. As men and women transition from schooling to the workforce, their skillsets continue to be shaped and valued differently. It is in this space that reskilling can play a key role in valorizing all skills needed in the future of work, and, therefore, in incentivizing men and women to participate without gender bias in all types of work.
- As shown by this year’s index results, the scale and speed of progress are deeply insufficient to achieve gender equality by 2030. Resourcing gender-equality efforts is crucial to avoid the rollback of hard-earned progress, and to ensure that pathways to growth, prosperity, innovation, and sustainability are levelling the ground for all persons. Achieving gender equality demands government and business to shift both resources and mindsets towards a new paradigm of economic thinking, where gender parity is embraced as a condition for equitable and sustainable growth. Through collaborative efforts and targeted interventions between governments and business, we can make 50/50 a reality.

1

Benchmarking gender gaps, 2024

The Global Gender Gap Index was first introduced by the World Economic Forum in 2006 to benchmark progress towards gender parity across four dimensions: economic opportunities, education, health and political leadership (Figure 1.1).

Throughout its eighteen editions, the index has intended to offer a stable metric for the assessment of changes in gender parity indicators over time. Using the methodology introduced in 2006, the index and the analysis focus on benchmarking parity between women and men at global, regional and economy levels based on the latest available data.

FIGURE 1.1

The Global Gender Gap Index Framework

The level of progress toward gender parity (the parity score) for each indicator is calculated as the ratio of the value of each indicator for women to the value for men. A parity score of 1 indicates full parity. The gender gap is the distance from full parity.

For further information on the index methodology, please refer to Appendix B.

1.1 Country coverage

To ensure a global representation of the gender gap, the report aims to cover as many economies as possible. For an economy to be included, it must report data for a minimum 12 of the 14 indicators that comprise the index. The index endeavours to include the latest data available, reported within the last 10 years.

It should be noted that there may be time lags in the data collection and validation processes across the organizations from which the data is sourced, and that all results should be interpreted within a range of global, regional and national contextual factors. The Economy Profiles at the end of the report provide a large range of additional data.

The report this year covers 146 economies. Guyana makes a return to the index in 2024, while Sudan and Uzbekistan are included for the first time.

Among the 146 economies included this year are a set of 101 economies that have been covered in all editions since the inaugural one in 2006. Scores based on this constant set of economies are used to compare regional and global aggregates across time.

1.2 Global results

The global gender gap score in 2024 for all 146 countries included in this edition stands at 68.5% closed. Compared against the constant sample of 143 countries included in last year's edition, the global gender gap has been closed by a further +.1 percentage point, from 68.5% to 68.6%. Furthermore, when considering the 101 countries covered continuously from 2006 to 2024, the gap has also improved +.1 points and reached 68.6%.

Compared to last year, a broader number of economies register increases in their gender parity scores, contributing a narrowing of the overall gender gap: in 2024, 50.1% of economies in the sample report score increases, 6.1% show no change in score, and 43.8% report negative score changes. The economies with the greatest increases in score are Ecuador (+5.1 percentage points), Sierra Leone (+4 percentage points), Algeria (+3.9 percentage points), Guatemala (+3.8 percentage points) and The Gambia (+2.8 percentage points). The economies whose scores declined the most are Rwanda (-3.8 percentage points), Bangladesh (-3.3 percentage points), Lao PDR (-3.3 percentage points), Bhutan (-3.1 percentage points) and Jamaica (-2.2 percentage points).

The 2024 index also shows important changes in ranking. The five economies that improved their rankings the most climb over 20 places: Ecuador (+34, ranked 16th), Sierra Leone (+32, ranked 80th), Guatemala (+24, ranked 93rd), Cyprus (+22, ranked 84th) and Romania and Greece (+20, ranked 68th and 73rd, respectively). The most significant drops in ranking are also negative shifts of over 20 places: Bangladesh (-40, ranked 99th), Lao PDR (-35, ranked 89th), El Salvador (-28, ranked 96th), Rwanda (-27, ranked 39th) and Bhutan (-21, ranked 124th). Table 1.1 shows the 2024 Global Gender Gap rankings and scores for all 146 countries included in this year's report.

In the 18th edition, European economies occupy seven spots in the global top 10, continuing to represent most top performing countries. The remaining three spots are occupied by economies from Eastern Asia and the Pacific (New Zealand, ranked 4th), Latin America and the Caribbean (Nicaragua, ranked 6th), and Sub-Saharan Africa (Namibia, ranked 8th). Although no country has yet achieved full gender parity, the top nine countries (Iceland, Finland, Norway, New Zealand, Sweden, Nicaragua, Germany, Namibia and Ireland) have closed at least 80% of their gap.

Note

BEL = Belgium; CHE = Switzerland; DEU = Germany; DNK = Denmark; ESP = Spain; FIN = Finland; GBR = United Kingdom; IRL = Ireland; ISL = Iceland; ; LSO = Lesotho; LTU = Lithuania; LVA = Latvia; NAM = Namibia; NIC = Nicaragua; NLD = Netherlands; NOR = Norway; NZL = New Zealand; PHL = Philippines; RWA = Rwanda; SVN = Slovenia; SWE = Sweden; ZAF = South Africa.

Ranked again as number one, Iceland (1st, 93.5%) has now been leading the index for a decade and a half. It remains the sole economy in the index to have closed over 90% of its gender gap. Alongside Iceland, the top five also includes long-standing high performers such as Finland (2nd, 87.5%, up one position from 2023); Norway (3rd, 87.5%, down one position from last year); and Sweden (5th, 81.6%). New Zealand (4th, 83.5%) makes the top five for the 5th year in a row, and 9th year overall.

In this edition, Lithuania (11th, 79.3%) dropped out of the bottom position in the top 10, with Spain climbing +8 ranks to take its place, joining top performers for the third time (10th, 79.7%). Belgium also dropped out of the top 10 to 12th, while Ireland returns to 9th position after a one-year absence from the top 10. Rejoining the index in 2024 is Guyana (35th, 76.5%), with its highest gender-gap

score since it was first included in the index in 2021, and with same rank as in 2022. Uzbekistan (108th, 68.1%) and Sudan (146th, 56.8%) join the index for the first time.

This year, the bottom 10 include Morocco, Niger, Algeria, Democratic Republic of the Congo, Mali, Guinea, Iran, Chad, Pakistan and Sudan.

The top 10 continues to show a high level of stability in its configuration across editions (Figure 1.2). Since 2006, European economies have occupied 68.3% of the top 10 ranks; Eastern Asia and the Pacific economies, 16.7%; Sub-Saharan Africa economies, 9.4%; and Latin America and the Caribbean economies, 5.6%. To date, no economies from Northern America, Central Asia, Southern Asia, or Middle East and North Africa have been featured in the top 10.

TABLE 1.1 | The Global Gender Gap Index 2024 rankings

Note
 “–” indicates score or rank is unchanged from the previous year. “n/a” indicates that the country was not covered in previous editions. * New to index in 2024.

1.3 Performance by subindex

This section presents the state of gender gaps across the four main components (subindexes) of the index: Economic Participation and Opportunity, Educational Attainment, Health and Survival, and Political Empowerment. In addition to presenting the aggregate performance of the 146 economies included in the 2024 index across individual dimensions of the index, the subindex analysis offers insights into the different indicators driving the overall average global gender gap score.

Figure 1.3 shows the gender gap scores corresponding to each of the four subindexes. The Health and Survival gender gap has closed by 96%, Educational Attainment by 94.9%, Economic Participation and Opportunity by 60.5%, and Political Empowerment by 22.5%.

FIGURE 1.3 The state of gender gaps, by subindex
Percentage of the gender gap closed to date, 2024

Source
World Economic Forum, Global Gender Gap Index 2024.

Note
Population-weighted averages, 146 countries. The percentages indicate of the gender gap that has been closed to date.

Upon comparing the 143 economies included in both the 2024 and 2023 edition, the Economic Participation and Opportunity subindex shows a +.6% percentage-point change, while the Political Empowerment subindex shows a less perceptible +.1 point shift. Compared to 2023, Health and Survival has remained virtually unchanged, with a slight +.1 point improvement. Educational Attainment was the only dimension to register a slight decrease in score from 2023 (-0.5 percentage points, based on the 143 country sample).

The score distributions of the 146 economies included in the 2024 edition offer a more detailed picture of the disparities that exist not only between subindexes, but within them. Figure 1.4 illustrates the distribution of individual economy scores attained, by subindex.

FIGURE 1.4 | Range of scores, Global Gender Gap Index and subindexes, 2024

Source

World Economic Forum, Global Gender Gap Index 2024.

Note

Blue diamonds correspond to population-weighted averages.

Globally, the second-largest gap to bridge is in **Economic Participation and Opportunity**. Countries included in the 2024 index are not advancing towards economic gender parity as a uniform block, as the score distribution would suggest. Approximately 24% of the sample has gender parity scores lower than the weighted global average for this subindex. In this 18th edition, the lowest reported score on this subindex is 31.1% (Bangladesh), while the highest is 87.4% (Liberia).

The group of economies with the lowest levels of economic parity are Bangladesh (31.1%), Sudan (33.7%), Iran (34.3%), Pakistan (36%), India (39.8%) and Morocco (40.6%). These economies all register less than 30% gender parity in estimated earned income. In addition, the level of parity in labour-force participation rate is under 50% for all listed economies, the lowest point being 20.1% for Iran. One distinct weakness in gender parity globally comes in the underrepresentation of women in the workforce, both overall and in senior and managerial roles – with parity in senior roles globally reaching only 40.5%, the lowest score across the subindex.

The economies where economic gender parity is highest include Liberia (87.4%), Botswana (85.4%),

Barbados (84.8%), Eswatini (84%) and Moldova (83.7%), where gender parity in labour-force participation rate is above 95%. Botswana, Eswatini, Moldova and Barbados all register parity (100%) in their share of technical and professional workers; Botswana and Liberia achieve 100% parity for their share of women in senior roles. Across all five highest performers on this subindex, gender parity in estimated earned income rises above 75%.

The dispersion of gender parity scores across the **Educational Attainment** subindex shows that overall performance is strong, yet a group of countries continue to lag behind full parity. Six economies have scores lower than 80%, all part of the Sub-Saharan Africa region, with the lowest score registered by Chad (66.7%). By contrast, full parity scores of 100% have been achieved by 33 (or 22.6%) of the economies in the sample.

The five lowest-scoring countries in the Educational Attainment subindex include Chad (66.7%), Democratic Republic of the Congo (68.3%), Angola (74.3%), Guinea (73.2%) and Mali (77.6%). The gender gap in literacy in Guinea, Chad and Mali ranges between 46% and 49%. While the levels of gender parity in primary education enrolment are

above 80% for all five, the share of female enrolment at this level of education ranges between 67.4% in Chad to 53% in Mali. The progression to secondary school does not improve numbers, with female enrolment shares ranging between 17.9% in Chad and 44.1% in Democratic Republic of the Congo. In none of these countries is the share of women in tertiary education higher than 11%, whereas men's share of enrolment is nearly double or more in all countries except for Angola.

In the **Health and Survival** subindex, economy performance is strong and clusters near parity. This subindex has remained moderately stable throughout the 18 editions due to two slowly progressing indicators. Compared to the last edition, only 19 economies report changes in their score on this subindex, three of them negative (Serbia, Spain and Malta) and the rest positive. China, Azerbaijan and Armenia all report increases of over +0.2 percentage

points. Similarly, Albania and Montenegro see increases of over +0.1 percentage points.

Overall, the average global score for gender parity is lowest in the **Political Empowerment** subindex (22.5%), which also registers the greatest score dispersion. Despite showing rapid progression over the past 18 editions, over half (52%) of the 146 economies included in this edition score under the global weighted average of 22.5%. Out of the entire sample, only 12 economies register parity scores of over 50%: Iceland (97.2%), Norway (74.6%), Finland (73.4%), New Zealand (63.1%), Nicaragua (62.6%), Germany (60.4%), Bangladesh (54.3%), Mozambique (54.2%), South Africa (51.3%), Ireland (50.7%), Sweden (50.6%) and Chile (50.2%). Most high-scoring countries on this subindex report scores near parity at the ministerial level (apart from Bangladesh (9%) and Ireland (40%)), and score over 79% for women in parliament.

1.4 Progress over time

The index has documented the average yearly reduction of the gender gap since the inaugural edition of the report in 2006. This metric, applied to a consistent sample of 101 countries, allows for calculating the rate of progress at which efforts are moving, and, in turn, to project how many years it

will take to close each gender gap across the four subindexes.

The 18-year trajectory of global gender gaps, globally and by subindex, is charted in Figure 1.5.

World Economic Forum, Global Gender Gap Index 2024.

Note

* New to index in 2024.

This year's findings reveal that movement in the economic and political dimensions of the index is promising, but not dynamic enough to infuse the current upward curve with much needed momentum. Since 2006, global efforts, bridging 4.2 percentage points of the overall gender gap, have advanced by a yearly average of 0.24 percentage points. At this rate, economies will achieve global gender parity in 134 years. This shifts the goalpost to 2158 as the anticipated year for closing the gender gap – roughly five generations beyond the 2030 Sustainable Development Goal (SDG) target.

In 2024, the Health and Survival subindex comes in at 96%, 0.2 percentage points below its 2006 score of 96.2%. The subindex score has been slowly recuperating since dropping in 2022 to one of its lowest levels (95.6%). The improvement is in part linked to highly-populated countries reporting progressively higher levels of parity in sex ratio at birth (93% in 2024), bringing the indicator close to matching the 2006 score of 93.2%.

Stacked against last year's edition, the timeline to achieve parity in Educational Attainment has stretched from 16 to 20 years. With a score of 95.5%, this year's slight drop in educational parity is driven by a reduction in scores for literacy rate (from 95% to 91.4%), primary education enrolment (from 99.1% to 98.5%), and tertiary education enrolment (from 96.4% to 96.2%). Indicator scores are impacted by the country sample analysed each year, in addition to changes to indicator values in highly populated economies. Of the 146 economies included in this year's index, 42, or 28.8%, of them register score decreases against the prior edition, compared to 29, or 19.9%, in 2023.

The Economic Participation and Opportunity subindex has recovered to its highest gender parity score to date (60%, virtually on par with 2022), contributing to an upwards trajectory. Within this dimension, the most significant shifts at the indicator level occur in labour-force participation rate (65.7%), which builds towards recovery to the highest-registered score since 2006 across 101 economies (68%, in 2009). In 2024, 94 countries, or 64.4% of the sample, register score increases in this indicator, including 10 of the 15 most populous economies in the sample. The pace at which parity is advancing on this subindex projects that gender parity will be achieved in 152 years.

The Political Empowerment subindex, with a score of 22.8%, shows virtually no movement since last year. After peaking in 2019 at 25.2%, the subindex dropped in 2021 and since then been moving on a lower trajectory. This is due in part to the diminishing tenures of women sitting as heads of state over the past 50 years. Nonetheless, all three indicators in the Political Empowerment subindex show a sliver of improvement compared to last year's results. Of all three indicators that make up this subindex, the share of women in parliamentary positions is the only one to report an almost uninterrupted positive trajectory since 2006. It will nonetheless take 169 years to close the subindex gap, given the current pace of efforts.

1.5 Performance by region

The *Global Gender Gap Report 2024* groups countries into eight regions, revised in this edition for consistency across flagship reports published by the World Economic Forum: Central Asia, Eastern Asia and the Pacific, Europe, Latin America and the Caribbean, Middle East and Northern Africa, Northern America, Southern Asia, and Sub-Saharan Africa. Countries in each regional group are listed in Appendix A.

Across the gender-parity scale, regional scores cluster around three different points (Figure 1.6). The first includes three regions that have closed

just about three-quarters of their gender parity gap. The region with the highest gender parity score is Europe (75%), followed closely by Northern America (74.8%) and Latin America and the Caribbean (74.2%). The second cluster includes three regions with scores just under 70%: Eastern Asia and the Pacific (69.2%), Central Asia (69.1%) and Sub-Saharan Africa (68.4%). The final cluster includes two remaining regions that have closed about two-thirds of their gender gap: Southern Asia, with a score of 63.7%, and Middle East and Northern Africa, with a score of 61.7%.

FIGURE 1.6 Gender gap closed to date, by region

World Economic Forum, Global Gender Gap Index 2024.

Note
Population-weighted averages. 146 countries.

Figure 1.7 presents a more granular assessment of the various components of the regional gender parity scores. It disaggregates regional scores by subindex, shaded according to the level of parity attained. All regions report higher levels of gender parity in Educational Attainment and Health and Survival. Political Empowerment is the subindex where gender parity is lowest, although there is significant variation between regional scores. Northern America and Southern Asia achieve

nearly double the political parity scores of both Central Asia and Eastern Asia and the Pacific, while scores of both Europe and Latin America and the Caribbean more than triple those of Middle East and Northern Africa. There are also substantive regional differences in their trajectories to attain economic parity, with the difference between the highest performer (Northern America, 76.3%) and lowest performer (Southern Asia, 38.8%) reaching 37.5 percentage points.

FIGURE 1.7 | Regional performance 2024, by subindex

Source World Economic Forum, Global Gender Gap Index, 2024.

Note Population-weighted averages, 146 countries. The percentages indicate the gender gap that has been closed to date.

The 18-year trajectories of the eight regions assessed by the Global Gender Gap Index are illustrated in Figure 1.8, using the values corresponding to the constant sample of 101 economies included in all editions since 2006. Over time, all regions have shown some measure of improvement. The overall rate of progress has been highest in Latin America and the Caribbean since 2006. The region has seen an overall improvement of 8.3 percentage points since 2006, showing that gender parity efforts across the region have been sufficiently cohesive and constant to allow the score rise year after year. Europe, Sub-Saharan Africa, and Middle East and Northern Africa have had stable, gradually improving trajectories. Respectively, they have bridged the gender gap by

6.2, 5.6, and 3.9 percentage points since 2006. Southern Asia recorded fast improvement until 2016, when its performance began to decline. As a result, progress in the region has fallen against 2006, from 7.1 in 2016 to 3.9 percentage points in 2024, suggesting substantive setbacks to gender parity efforts. Northern America has had a variable trajectory, with both peaks and valleys, whereas Eastern Asia and the Pacific has remained largely flat. These two regions have narrowed their gender gap by 4.3 and 3.1 percentage points, respectively, since 2006. Finally, while starting on a par with Europe in 2006 but registering little progress across editions, Central Asia's curve has shown a negative trajectory since 2022, with progress to date coming in at 2.3 percentage points since 2006.

Note
Population-weighted averages for the 101 economies featured in all editions of the index, from 2006–2024. Results of the fourteenth edition of the Global Gender Gap Index were presented in the *Global Gender Gap Report 2020*, released in December 2019. There is no corresponding edition for 2019.

Central Asia

With a 2024 score of 69.1%, Central Asia ranks fifth out of eight regions on the overall Gender Gap Index. Based on the aggregated scores of the constant sample of economies included since 2006, its parity score has slightly regressed since last year, despite an overall improvement of +2.3 percentage points since 2006.

All seven economies included in Central Asia have achieved a level of parity equal to or higher than 67%, and the three best-performing countries all register gender parity scores of 71% or higher: Armenia (72.1%, 64th), Georgia (71.6%, 69th) and Kazakhstan (71%, 76th). The difference between the countries at the top and bottom of the regional table is 4.8 percentage points, making it one of the least dispersed regions.

In this edition of the index, Economic Participation and Opportunity in Central Asia shows slight signs of regression with a score of 73.4%. In 2021, the region's curve began trending upwards after

flattening over a four-year stretch. That momentum has been brought to a virtual halt by a negative change in score of -0.6 percentage points, resulting from divergent performances across indicators. The level of parity in labour-force participation rate in six out of the seven economies is over 60%, except for Uzbekistan (54.6%). Across five of the seven economies in the region that provide data on professional and technical workers, female shares of workers actually surpass the male shares. However, in the same five countries, the share of women in legislative and managerial roles is well below 50%, and in the case of Armenia for every woman in a leadership role, there are more than two men (29.6% vs 70.3%). Gender parity in estimated earned income is not homogenous in Central Asia either. In Uzbekistan and Tajikistan, men earn at least twice that of women, resulting in parity scores under 50%.

Central Asia maintains near-parity status in Educational Attainment and has the second-highest parity score of all regions (99.6%), after Northern America (100%). All seven countries report virtual parity across literacy and primary enrolment

indicators. Slight differences in educational outcomes result from widening gaps between the female and male shares of enrolment for secondary education in Azerbaijan (95.7%), Georgia (96.1%). Similar gaps are seen in tertiary education, between Tajikistan (72.7%) and Uzbekistan (94%). The subindex nonetheless remains somewhat stable since the 2023 edition, with only a -0.4 percentage-point drop across the scale. The region also continues to orbit close to parity in Health and Survival, without significant changes to its subindex score.

Since the last edition, the most significant movement across subindexes for Central Asia is in Political Empowerment. The degree of political parity fell by -1.7 percentage points compared to last year, curving the regional trajectory further downward. In 2024, Azerbaijan registers the lowest regional score of zero for women in ministerial positions, while Armenia and Georgia reach the highest of 20%. Parity at the parliamentary level is considerably higher in the region, ranging from 22.1% in Azerbaijan to 57.5% in Armenia.

Europe

Europe ranks first on the 2024 regional rankings, having closed three-quarters of its gender gap (75%). Using the constant sample of countries, Europe's overall parity score has improved +6.2 percentage points since 2006.

The five economies leading the pack are all global top 10 countries: Iceland, Finland, Norway, Sweden and Germany. Out of the 40 economies monitored in this region, 21 have closed over 75% of their gender gap. There is a high level of dispersion of regional scores in Europe. Iceland, as the highest-ranking in the group, leads by 29 percentage points ahead of Türkiye (64.5%), the lowest-ranking.

Continuing a rather flat trajectory, Europe makes modest gains in economic parity since last year. Its Economic Opportunity and Participation gender parity score (67.8%) registers a slight uptick of +0.4 percentage points. Performance across economic indicators is predominantly positive, albeit with some exceptions. Only one of the 40 economies in the region shows gender parity in labour-force participation rate lower than 50%, Türkiye (49.2%), while 27 have over 80% parity on this indicator. Workforce indicators suggest that across European economies, women represent between 18.5% (Türkiye) and 46.3% (Belarus) of the workforce at the senior leadership level, and between 42.4% (Türkiye) and 69.38% of the workforce at the technical and professional level.

Europe has the fourth-highest educational gender parity score (95.5%), after Northern America (100%), Central Asia (99.6%) and Latin America and the Caribbean (99.5%). There are virtually no changes to its Educational Attainment subindex score (99.5%)

since last year. Over 70% of the economies in the region register parity in literacy, as well as 59% of those reporting on primary education enrolment and 57.5% in secondary education enrolment. Most notably, every European economy reports parity in tertiary education enrolment – although the male and female shares of enrolment vary significantly in magnitude between economies.

The Health and Survival subindex score has not changed significantly for Europe in four editions, failing to climb back to 2016 levels (97.7%). Only 11 of the economies in the region register parity for healthy life expectancy, compared to the 22 that have full parity score in sex birth at ratio.

In Political Empowerment, Europe has an upwards trending trajectory that continues to score progressively higher almost every year. In 2024, Europe has the highest level of political parity of all regions (36%), with Latin America and the Caribbean the closest region to follow, at 34%. Eight economies in the region show parity at the ministerial level: Norway, Albania, Belgium, Spain, Finland, Iceland, Netherlands and Portugal. Parity in parliaments varies significantly, with 16.7% of the gender gap closed in Cyprus and 90.8% in Iceland.

Eastern Asia and the Pacific

With just under one-third of the gap to close, Eastern Asia and the Pacific (69.2%) ranks fourth out of the eight regions in 2024. The constant country sample shows that the region's gender-parity score improved in the last year and has advanced a total +3.1 percentage points since 2006.

The five leading economies in the region are New Zealand (83.5%), Australia (78%), Philippines (77.9%), Singapore (74.4%) and Thailand (72%). Out of the 18 economies in the region, New Zealand ranks in the global top 10, yet only half have closed 70% or more of their gender gap. Scores in Eastern Asia and the Pacific are moderately dispersed. Fiji (64.2%), comes in last in the regional ranks, 19.3 percentage points behind New Zealand (83.5%).

In Economic Opportunity and Participation (71.7%), Eastern Asia and the Pacific ranks third out of eight blocks. It also has the third-highest score change since 2023 (+.6 percentage points) and registers its second-highest score since 2006. At the indicator level, economies in the Eastern Asia and Pacific are on parallel tracks of progress. While 77% of the group scores over 70% gender parity in labour-force participation rate, economies that trail behind have significant ground to cover, with scores as low as 50% (Fiji). The degree to which women are represented in the workforce is also very unequal. The share of women in senior leadership roles in the region ranges between 14.6% (Japan) and 48.6% (Philippines), while women in professional and technical roles make up between 38.1% (Timor-Leste) and 63% (Mongolia).

Eastern Asia and Pacific economies trail behind five other regions in terms of Educational Attainment (95.1%). The collective educational parity score has trended negatively for the past five years and has not yet recovered to the level of its highest score, recorded in 2015 (98.7%). Seven economies show full parity in literacy. Nine economies report parity between the male and female shares of enrolment at the primary level, 11 report parity at the secondary level, and 13 at the tertiary level. However, countries at the lower end of the scale trail between 6 to 15 percentage points behind on otherwise low-dispersion indicators, signaling important disparities between countries in the group.

The Health and Survival subindex shares similarities with Educational Attainment. Despite surpassing its original 2006 score of 94.8%, in 2024 the region ranks last globally on this subindex, with an overall score of 95%. Four countries show full parity in healthy life expectancy, with the rest following close behind. China, Viet Nam, Brunei and the Philippines report the broadest gender gaps in sex ratio at birth.

In the Political Empowerment subindex (14.5%), Eastern Asian and Pacific economies have the third-largest regional gap to bridge, of 85.5 percentage points. Comparing the 2024 status quo against 2006, Eastern Asia and the Pacific has made the least progress, only 3.4 percentage points. This is despite achieving a collective 17.1% score in 2018. Women have low representation at the ministerial level in Eastern Asia and the Pacific. Only 10 countries have a score of gender parity of 15% or more at the ministerial level, and only one – Australia (83.3%) – has more than 80%. At the parliamentary level, all countries have at least one woman in parliament. However, there are stark differences in representation between Vanuatu, with a 2% share of seats, and New Zealand, where women have a 45.5% share of seats.

Latin America and the Caribbean

Latin America and the Caribbean ranks third out of eight regions, with an overall gender parity score of 74.2%. The constant country sample shows that since 2006, the region has gone furthest out of all regions, reducing its gender gap by 8.3 percentage points.

The vast majority (86.3%) of the 22 Latin American and Caribbean economies have closed at least 70% of their gender gap. Together with Northern America, it is one of two regions where all countries rank within the top 100. Two Central American countries, Nicaragua (81.1%) and El Salvador (69.5%), are at the top and bottom of the regional table, with an 11.6 percentage-point difference between them.

The region's path towards economic parity has been incremental and positive throughout the 18 editions, with minor negative variations. Out of

all regions, Latin America and the Caribbean has registered the most progress across the Economic Participation and Opportunity subindex, advancing +9.8 percentage points since 2006. In 2024, it also reached its highest score to date, of 65.7%, a slight uptick of +.5 percentage points from 2023. Parity in every Latin American and Caribbean economy is over 50% in labour-force participation rate, with Peru, Jamaica, Bolivia and Barbados all reporting scores over 80%. Women have a high level of representation in professional and technical roles, with 68% of the region showing full parity for this indicator. The share of women in legislative, senior officers, and manager roles varies widely within the region: in Honduras, women occupy 29.7% of top roles, compared to 62.1% in Jamaica. Women also have lower estimated incomes than men across all economies. The two economies with higher levels of gender parity on this indicator are Barbados (86.6%) and Jamaica (80.8%)

In Educational Attainment (99.5%) and Health and Survival (97.6%), there are no significant changes against 2023, and the region ranks third and second, respectively. Ten out of 22 economies in the region report full parity in literacy, 50% of the economies have achieved parity in primary education enrolment, 90.9% have achieved parity in secondary education enrolment, and 100% in tertiary education enrolment. However, the magnitude of enrolment shares varies widely between economies for each indicator, suggesting efforts to increase access to equitable education are still needed. In Health and Survival, all economies in the region achieve parity in sex at birth ratio, while economies like Bolivia, Peru and Honduras fall behind top performers in healthy life expectancy, with a gap of +.05 percentage points.

In the Political Empowerment subindex, Latin American countries register a collective -1 percentage-point drop against last year's score, a small retrenchment after many years of progress: After advancing the most out of all regions since 2006, narrowing the regional gap by over 22.4 percentage points, it is still the second-highest ranked region in 2024 with a score of 34%. Nicaragua, Ecuador and Chile show gender balance at the ministerial level. Guatemala, Colombia and Mexico are not far behind, with scores above 70% and shares of over 40% of women in ministerial roles. Only in two economies do women have equal representation with men in parliament: Mexico and Nicaragua. Across the region, the share of women in parliamentary roles varies between 15.6% (Belize) to 53.9% (Nicaragua).

Middle East and Northern Africa

Since 2006, the MENA region has advanced +3.9 percentage points on its overall gender-parity score. Despite this positive trajectory, Middle East and Northern Africa ranks last out of all regions, having closed under two-thirds of its

regional gender gap (61.7%). About 86.7% of the economies in the region have closed over 60% of their gender gap, yet the distance between United Arab Emirates, ranked 1st in the region, and Sudan, ranked 15th, remains relatively wide, at 14.5 percentage points. Furthermore, only two out of the 15 economies in Middle East and Northern Africa rank in the top 100, showing there is still some progress to be made.

In terms of Economic Participation and Opportunity, Middle Eastern and Northern African countries log the seventh-highest regional score, 43.1%, which represents a +1.8 percentage-point change since last year, and a +3.1 percentage-point improvement since 2006. Gender parity in labour-force participation rate remains low compared to other regions, with the majority of gender gap scores on this indicator lower than 65% and as low as 20.1% (Iran). However, women's representation in the workforce is evolving – gender parity in technical and professional roles is higher than 70% in seven economies (Morocco, Sudan, Tunisia, Algeria, Kuwait, Lebanon and Israel), and higher than the global average (40.5%) in Oman (43.3%), Israel (46.7%) and Jordan (90.3%) for women in legislative, senior officer and managerial roles.

The region has made marked advances in Educational Attainment since 2006, improving the subindex score by +5.2 percentage points over time, culminating in a 2024 educational parity score of 97.2%. Gender parity in literacy is over 80% in every economy, with Qatar (99.7%) and Jordan (99.4%) leading the region. With the exception of Sudan (92.9%), every economy reporting on primary education enrolment has achieved near or full parity. For secondary education enrolment, eight economies have achieved parity. Only Bahrain (96.2%) and Egypt (96.4%) have a +3 percentage-point gender gap to close. In 2024, all economies in Middle East and Northern Africa have reached parity in tertiary education enrolment. Nonetheless, the low shares of enrolment across educational levels testify to the unrelenting need to expand access to educational opportunities to all in the region.

In Health and Survival, Middle East and North Africa has closed 96.4% of its gender gap. The score remains unchanged compared to 2023, but is a reduction of -1 percentage point since 2006. All economies in the region have a balanced sex ratio at birth. However, a gender gap of over +3 percentage points in healthy life expectancy is yet to be closed in Qatar (95.5%), Jordan (98.6%) and Algeria (99%).

Political Empowerment in the region ranks eighth globally, with just 11.7% of gender parity achieved. Nonetheless, the region has made substantive progress since the index was launched, reducing the level of gender disparity on this subindex by +8.4 percentage points since 2006. Women occupy ministerial roles to varying degrees across

Middle East and Northern Africa, with the highest shares of representation attained in Tunisia (36.4%), Morocco (26.3%) and Jordan (22.2%). At the parliamentary level, women hold a higher proportion of roles in Egypt (27.7%), Israel (25%) and Morocco (24.3%) compared to the rest of the region, but full parity in parliament is only achieved in United Arab Emirates.

Northern America

Ranked second globally, Northern America stands 0.2 percentage points away from Europe, at 74.8%. The constant country sample shows that the North American economies have progressed +4.3 percentage points across the index since 2006. Both economies rank in the top 50, and both have closed around 75% of their gender gap, with a difference of less than 1.5% between them.

Despite experiencing a -1.3 percentage-point drop from 2023, the region has the highest Economic Participation and Opportunity score of all eight blocks, standing at 76.3%. This is a result of both Canada and the United States enjoying high parity scores in labour-force participation rate (88.4% and 84.1% respectively), and parity in technical and professional workers. In contrast, for both countries, gender parity for estimated earned income rests below 70%, and the shares of women in senior roles are 42.6% for the United States and 35.5% for Canada. While levels are high, change is slow: when taking into account the entire time series, Northern America has made virtually no progress in closing the economic gender gap since 2006 (+0.7 percentage points).

The region also ranks first in the Educational Attainment subindex, with a score of 100%. While this dimension of the index is relatively stable, it has improved its 2006 score by +1.6 percentage points overall. Both countries retain parity (United States) or near-parity (Canada) for primary education enrolment and secondary education enrolment. In tertiary education enrolment, the shares of women vastly surpass those of men, by over 30 percentage points in both countries.

In Health and Survival, North America bridges 96.9% of its gender gap in 2024, a score that sits -1 percentage point lower than the 2006 score. The region retains parity on the sex ratio at birth indicator, and registers scores close to parity for healthy life expectancy.

In Political Empowerment, the region scores just 26%, tied with Southern Asia for third. While its 2023 score remains mostly unchanged, Northern America has the third-highest percentage-point improvement on the political dimension since 2006 (+15.7), after both Latin American and the Caribbean and Europe. In the United States, for every woman minister there are two men. Yet, in Canada, there is only a 9 percentage-point

difference, leading to a higher gender-parity score of 78.9% for ministerial parity. In both countries, the share of women in parliament is less than half that of men's, rendering lower parity scores for both Canada (43.7%) and the United States (41.2%).

Southern Asia

In seventh place is Southern Asia, with a gender-parity score of 63.7%. Using the constant country sample as a reference, the regional block shows a variable trajectory, with a curve that trended upwards early in the sample, yet saw a sharp decline in 2019. Despite the ups and downs, Southern Asia has improved by +3.9 percentage points its overall gender gap score since 2006. Six out of the seven economies in the region rank below the top 100, and their scores are grouped within a 12 percentage-point range between the top- and bottom-ranked economies, Bangladesh (1st in the region, 99th overall) and Pakistan (7th in the region, 146th overall). Just four out of the six have closed two-thirds of their overall gender gap.

Southern Asia ranks lowest in Economic Participation and Opportunity, with a score that, at 38.8%, situates the region at half the level of economic parity of Northern America. While the region made a gain of +1.1 percentage points against its 2023 score, when compared against the entire time series, it shows an overall decrease of -1.1 percentage points since 2006. The labour-force participation rate of women in the region is quite low, compared to men's. This results in lower than global average gender parity scores (< 65.7%) for all economies except Bangladesh (68.9%). Women are also largely underrepresented in legislative, senior officer and managerial roles, accounting for less than one-third of workers in the category. In professional and technical roles, there is increased gender parity between the shares of men and women in the category, but high variance between economies. While Sri Lanka has a highly equitable professional and technical workforce (96.8%), Pakistan displays strong gender imbalance in favour of men (35.8%).

Southern Asia ranks second-lowest in Educational Attainment, with a score of 94.5%, -2.5 percentage points lower than its 2023 performance. This reflects how lagging gaps in highly populated countries affect regional progress, notably the low literacy scores in Pakistan (67%) and Nepal (78%), as well as significant gaps in enrolment across education levels in Pakistan. The region has nonetheless advanced the most since 2006, elevating educational gender parity by +13.4 percentage points – over two times the leap made by the Middle East and Northern Africa and Sub-Saharan Africa regions during the same period.

The region has remained largely stable across the Health and Survival subindex. In 2024, Southern Asia scores 95.4%, showing no significant change from

2023, and, similar to other regions, displays a slightly negative trend across editions.

Finally, Southern Asia is tied for third with Northern America in the Political Empowerment subindex. Its 2024 score of 26% shows a slight decline of -0.7 percentage points from 2023. The region has moved +4 percentage points towards political parity since 2006. This progress across the subindex is in large part linked to consistently high parity scores on the head-of-state indicator over time. However, when it comes to other indicators in the subindex, Southern Asia has significant ground to cover. At the ministerial level, only Nepal (23.5%) comes close to reaching the global average score for this indicator. Women's representation in parliaments across the region is also low compared to other regions. Only Nepal (49.9%) surpasses the global average score of 33%

Sub-Saharan Africa

In sixth place, Sub-Saharan Africa edges closer to gender parity, with a score of 68.4%. The region is comprised of the largest number of economies in a single grouping (35), and includes three of the 15 most populous countries highlighted in the report – Ethiopia (79th, 70.9%), Nigeria (125th, 65%) and Democratic Republic of the Congo (140th, 60.9%) – which can affect overall regional results by edition and over time. Based on the constant sample and its performance across editions, Sub-Saharan Africa has increased its collective gender parity score by +5.6 percentage points since 2006, the third-largest improvement made by a region since the launch of the index.

Out of the 35 economies included in the group, 21 are in the top 100, and one, Namibia, is in the top 10. The top five performers in the region are Namibia (8th, 80.5%), South Africa (18th, 78.5%), Mozambique (27th, 77.6%), Burundi (38th, 75.7%), and Rwanda (39th, 75.7%). Over half of Sub-Saharan African countries (18) have closed over 70% of their gender gap, and only Chad trails behind the two-thirds mark (57.6%). Nonetheless, the region is characterized by a high level of dispersion between top and bottom ranks, with 22.8 percentage points between them.

The region places fourth in Economic Participation and Opportunity, with a score of 68.1%. The group of countries has seen a very minor +0.4 percentage-point increase since last year, and a total progression of +4.9 percentage points since 2006. Nevertheless, numerous countries in the region are moving promisingly towards economic gender parity. All economies in the group have gender parity scores over 50% on labour-force participation rate; five have a gender-balanced technical and professional workforce: Eswatini, Namibia, Botswana, Lesotho and South Africa; and seven have equal gender representation in senior economic roles: Liberia, Comoros, Nigeria, Togo, Burkina Faso, Botswana and Cameroon.

The region's performance is relatively lower in Educational Attainment, where it ranks last – the sole region with an educational parity score lower than 90% (88.9%). Yet, Sub-Saharan Africa has seen a +1 percentage-point change from its 2023 performance and has narrowed its educational gender gap by 5.8 percentage points since 2006. Compared to other regions, however, there are important educational gender gaps to address. Guinea, Chad, Liberia and Mali have over 48% of the literacy gap to close in 2024. In Chad, Guinea and Mali, the difference in shares between male and female primary education enrolments translates to gender parity scores of 89% or less. In secondary education, the gender gap in enrolments widens for Chad (59.7%), Democratic Republic of the Congo (63.4%) and Angola (65.2%). Progression through educational levels widens the gap further at the tertiary level in Chad (39.4%), Guinea (46%) and Niger (48%).

In Health and Survival, the region stands at 97.1% parity, which is virtually unchanged since 2006.

Lastly, Sub-Saharan Africa ranks fifth in Political Empowerment (22.6%). The region has moved a total of +11.3 percentage points upwards from its 2006 initial score, the fourth most significant effort across regions. In 2024, Mozambique and South Africa show parity at the ministerial level. Angola (64.3%), Ethiopia (57.1%), Burundi (50%) and Sierra Leone (50%) follow, with gender parity scores of 50% or higher. All Sub-Saharan African economies have women represented in parliament; however, only in Rwanda do women share equal representation with men. South Africa (85.9%) and Senegal (85.5%) are close behind in performance.

TABLE 1.3 The Global Gender Gap Index rankings by region, 2024

Central Asia

Economy	Rank		Score
	Regional	Global

World Economic Forum, Global Gender Gap Index 2024.

1.6 In-focus country performances: Top 10 and most populous

This section reviews the state of gender parity at economy level, touching on the four dimensions of the index as well as the trajectories followed to date. The economies in this section are both statistically and strategically significant to monitoring and benchmarking efforts, given their placement in the index as well as the share of the global female population they represent, which is approximate to two-thirds of the world's women and girls.

Top 10 economies

For 15 years consecutive years, **Iceland** has been at the top of the Global Gender Gap Index. In 2024, the country registers a score of 93.5%, a +2.3 percentage-point change since last edition, driven by increased economic parity in professional and technical workers and labour-force participation rate, as well as an increase in political parity at the ministerial level. Iceland has progressively improved its overall gender gap score from 78.1% in 2006 to 93.5% in 2024 – a marked +15.4 percentage points. A model of political parity, Iceland has more than doubled its Political Empowerment score from 2006 throughout all editions (from 45.6% to 97.2%). For the past two editions, the country has reported complete parity at the head-of-state level – with women as heads of state for an aggregate tenure of 26.6 out of the past 50 years. Furthermore, in 2024 women hold a 50% share of ministerial roles and 47.6% of parliamentary seats, giving Iceland a near perfect political parity score. In the Economic Participation and Opportunity subindex, however, Iceland has seen more variance. In 2024, its curve continues to recover, reaching over 81.5% but not yet recovering to its 2021 peak of 84.6%. Gender parity in the labour-force participation rate has also declined compared to recent years, standing at 90.3% in 2024 – a near 5 percentage-point gap from its best score, recorded in both 2015 and 2016. Iceland distinguishes itself by having full parity in professional and technical workers. Furthermore, after declines in 2018 and 2022, the country is seeing again a rise in gender parity for workers in legislative, senior officials, and managerial roles (65.6% in 2024). Educational Attainment also has high levels of gender parity in Iceland, with literacy, primary enrolment and tertiary enrolment scoring 100%, and secondary enrolment standing at 96.4%. Compared to other countries, Iceland has somewhat weaker parity scores on Health and Survival.

A fixture of the global top 10, **Finland** stands in second place in 2024 after climbing one rank and posting an improved gender parity score of 87.5% (+1.2 percentage points from 2023). This is driven mainly by improvements in the Political Empowerment dimension and to some extent positive developments in Economic Participation. Finland has increased its parity score by +7.9 percentage points since 2006. Unlike other

economies in the top 10, Finland's Economic Participation and Opportunity scores have remained mostly below the 80% mark. In 2024, economic parity in Finland rises for the second year running to 79.6%, but not quite reaching the 2015 peak of 81.5%. Like Iceland, Finland has maintained full parity in professional and technical roles but lost -0.5 points in parity for senior leadership roles (57%) since the last edition. Parity in estimated earned income has increased over the past five editions, currently standing at 74.4%, with improvements also in parity in labour-force participation and perceived wage equality for similar work compared to last year. Where Finland has performed consistently is in Educational Attainment, obtaining 100% scores in 13 out of the 18 editions. In Political Empowerment, Finland has reached the highest parity score yet – 73.4%. This is a +26.4 overall percentage-point improvement from 2006, boosted by full parity at ministerial level for the past four editions, as well as scores of over 80% gender parity in parliament (85.2% in 2024). Finland also recorded its highest parity score at the head-of-state level, 50.3%, after an aggregate 16.7-year tenure for the past 50 years, including Sanna Marin's recent tenure.

Losing one rank to Finland since the last edition, **Norway** ranks third with an overall score of 87.5%, after registering a -.4 reduction in overall score since 2023 owing to small losses in the Economic Participation and Opportunity and Political Empowerment dimensions. Through the past seven editions, Norway has posted consistently higher scores (except for a slight decrease in 2022). Overall, it has pushed its score forward by +7.6 percentage points since 2006. In 2024, its best performance in terms of absolute scores is in Educational Attainment, standing at 99.3%, bolstered by full parity in literacy and primary and tertiary education enrollments. In Health and Survival, Norway performs better than the global average, scoring 96.2%. In Economic Participation and Opportunity, Norway scores 79.9%, with relatively high parity scores in earned income (80.2%) and professional and technical workers (100%). Notably, in 2024, the share of women in professional and technical roles surpasses that of men. Nonetheless, room for improvement remains, as for every woman in a senior leadership role, there are still two men, resulting in a score of 49.6%. The country demonstrates a strong performance in Political Empowerment, reaching 74.6% and second place on this dimension globally, an improvement by more than 25 percentage points since 2006. Women have held head-of-state roles for 18.1 years in the past half-century and in 2024, there are more women ministers than men, resulting in a full parity score. Norway's parliamentary representation score drops -6 percentage points from 85.9% in 2023 to 79.9% in 2024.

Ranked fourth in 2024 and holding its position compared to last year, **New Zealand** showcases an overall parity score of 83.5%. This represents a -2.1 percentage-point reduction in score since last edition, but overall an +8.4 percentage-point improvement from its 2006 score. The drop in score compared to last year is explained by regressions in the Political Empowerment dimension. In terms of Economic Participation and Opportunity, New Zealand achieves a score of 74.1%, with its highest labour-force participation rate at 88.2%. New Zealand excels in Educational Attainment, boasting a perfect parity score for the past six editions. In 2024, full parity is registered across all Educational Attainment indicators, making it one of the top performers in its region. In Health and Survival, New Zealand surpasses the global average score by +0.6 percentage points, scoring 96.6%. The country's political gender gap stands at 63.1% closed, with robust parliamentary and ministerial representation between genders. While still placing 4th globally in Political Empowerment overall, this however represents a marked regression of 9.4 percentage points compared to 2023, driven by a 16.5-point loss on parliamentary parity and a 17.1-point loss on parity in ministerial positions. New Zealand is part of a select group of countries where women have had some of the longest tenures as head of state in the past 50 years, with 16.2 years. Similarly to Finland, Jacinda Ardern's departure put pause on women's time as head of state in New Zealand.

With no change to its position from last year, **Sweden** ranks fifth in 2024. Its overall gender parity score of 81.6% shows virtually no change from 2023 (+.05 percentage points) – nor does it in fact show change compared to 2006 (+ 0.24 over 18 years). In Economic Participation and Opportunity, Sweden scores 79.4%, in between oscillating scores ranging from its lowest at 73.1% in 2006 and highest of 83.6% in 2015). Like its Nordic neighbours, Sweden registers full parity for professional and technical workers, and a high level of parity for legislative, senior officials, and managerial roles (71.5%). Full parity in literacy and secondary and tertiary education enrolment contributes to full parity marks in Educational Attainment – a relatively stable subindex for Sweden across all editions of the index. Sweden also scores higher than the global average in Health and Survival, at 96.3%. Finally, on Political Empowerment, women continue to have high levels of representation at ministerial and parliamentary levels, with scores of 91.7% and 87.6%, respectively. However, Sweden falls behind neighbouring countries with a score of 1.8% on the head-of-state indicator.

In its tenth appearance within the global top 10, **Nicaragua** ranks 6th, with a score of 81.1%. Despite not registering a change in score, Nicaragua benefits from a relative change in rank (+1) compared to the last edition. Showing continued recovery from the 2021 drop in performance in the Economic Participation and

Opportunity subindex, Nicaragua achieves a score of 64.2%. At the indicator level, this result emerges from a combination of high parity in estimated earned income (70.4%) and full parity in professional and technical workers, where the proportion of women is higher than that of men. Nonetheless, Nicaragua shows a lower gender parity score in labour-force participation rate (57.7%) compared to other top 10 countries, and has lower representation of women in senior leadership, which translates to a medium parity score of 54.3%. The country displays effective parity in Educational Attainment at 99.9% and surpasses the global average on Health and Survival with a score of 97.8%. In terms of Political Empowerment, Nicaragua, achieves a score of 62.6%, with women holding larger shares in ministerial roles and parliamentary seats compared to men, resulting in parity on both indicators.

In seventh position, is **Germany**, with a slightly lower gender parity score of 81% and dropping one spot in the ranking (This is a reduction of -0.5 percentage points from its 2023 score, its highest to date). The losses are mainly driven by slight regressions in the Political Empowerment dimension, while Economic Participation sees a slight uptick. In Economic Participation and Opportunity, Germany has closed 67.6% of its gender gap with slight improvements on perceived wage equality for similar work compared to 2023. The overall score on this dimension mirrors advances and remaining opportunities for economic parity: while Germany has achieved full parity in professional and technical workers, it has a 59.3% gender gap to close for legislators, senior officials, and managers (score of 40.7%). Similarly, disparity in estimated earned income remains high, with a score of 63.6%. Despite yielding one spot in the subindex ranking, Germany's rank performance across subindexes is strongest in Political Empowerment (6th globally with a score of 60.4%). While Angela Merkel remains the last female head of state to date, her 16-year tenure continues to strengthen Germany's score (49.5%). Similarly, near-equal representation at the ministerial level results in a gender parity score of 87.5%, among the 20 highest in 2024 but a drop of 12.5 percentage points compared to 2023. Women's parliamentary representation is comparatively lower (score of 54.6%). Educational Attainment is where Germany ranks lowest across dimensions (91st), with a score of 98.7%.

Namibia places 8th in the 2024 index, having closed 80.5% of its gender gap. While the score is a small improvement compared to 2023, there is no change in rank. Namibia performs strongly across all four subindexes, placing in the top 25 in every dimension. In parity in Educational Attainment and Health and Survival, the Sub-Saharan economy is a top performer, with scores of 100% and 98%, respectively. In Economic Participation and Opportunity, Namibia is ahead of the global and regional averages by almost +18 and +10 percentage points. Economic gender parity

is high when it comes to labour-force participation (88.4%). Furthermore, Namibia has achieved full parity in technical and professional workers, and 77.2% gender parity in senior leadership roles. Nonetheless, its score of 78.3% shows a slight decrease from last year that runs parallel to a slight reduction in parity in estimated earned income (82.1%, -0.9 percentage points from 2023). Political parity in Namibia is among the 50 highest with an overall score of 45.6%, boosted by an incumbent female head of state who has lengthened her term since the last edition of the index (21.8%, +2.9 increase from 2023) and the continued representation of women at ministerial (46.2%) and parliamentary (79.2%) levels.

Returning to the top 10 after a one-year absence, **Ireland** places 9th with an overall gender gap score of 80.2%. Compared to 2023, this represents a +.7 percentage-point improvement and a two rank climb driven mainly by progress in the Political Empowerment dimension as well as small improvements across several Economic Participation indicators. Across subindexes, Ireland performs best in education (100%), where it shows full parity in the three indicators it reports. It is also among the 10 countries where political parity is highest, with a score of 50.7%. Similar to Germany, Ireland's Political Empowerment performance is lifted by the near 21 years that women have headed the state, resulting in a 71.2% score on this indicator. Parity at ministerial and parliamentary levels is comparatively lower, as women's low share of representation in these spaces leaves Ireland with remaining gender gaps of 60% and 70%, respectively. However, moving in the right direction, its parity score for ministerial positions improved by 10 percentage points between 2023 and 2024. In Economic Participation and Opportunity, Ireland has closed 73.7% of its gender gap, an improvement of +0.5 percentage points from 2023. Ireland boasts full parity in the technical and professional workforce yet shows gaps for senior leadership roles (61.8%) and estimated earned income (61.3%). Gender parity in labour-force participation rate has improved consistently, reaching its third-highest score (84.2%) since 2006.

Spain returns to the top 10 for the third time since 2006, with its highest gender parity score yet at 79.7% - a +.7 percentage-point increase from 2023. Climbing eight ranks since 2023, the positive change is mainly a result of strengthening Political Empowerment and a small overall improvement in Economic Participation and Opportunity. The European country outperforms both the global and regional averages on every indicator except for Health and Survival. In Economic Participation and Opportunity, Spain has increased economic parity over the past seven years to 73.2%. In 2024, the indicators where parity is highest are professional and technical workers (100%), and labour-force participation rate (84.6%). However, it should be noted that the female share in the latter is dramatically reduced compared to 2021 values (from 69.2% to 53.2%). Efforts are needed to further

boost women's representation in senior leadership roles (53.2%), as well as parity in estimated earned income (67.6%). In Educational Attainment, Spain has effectively closed the gender gap, with a slight disparity remaining in literacy. Despite not having had a woman as head of state, Spain has narrowed its Political Empowerment gap to 49.4%, with full parity at the ministerial level (100%) and increasing parity at the parliamentary level (79.5%, up from 73.6% in 2023).

15 most populous economies

The **Philippines** rank 25th in 2024 with a gender parity score of 77.9% (-1.2 percentage points from 2023 and a rank drop of 9 places). The Eastern Asia and Pacific economy performed below its 2023 score of 79.1%, stemming from losses in economic parity and a reduction in the share of women ministers. The country's Economic Participation and Opportunity score of 77.5% is -1.4 percentage points lower than in 2023, despite achieving parity in professional and technical workers (100%) and recording progress towards parity in labour-force participation to an all-time high (69.3%). The Philippines, however, sees a -5.3-percentage point reduction in the share of women in legislators, senior officials, and managers, which brings down its score to 94.7% and a drop of almost 2 percentage points in perceived wage equality for similar work. The economy has achieved full parity across all Educational Attainment indicators, although the shares of women enrolled at each level of education have not all consistently increased across editions of the index. In the Health and Survival subindex, an important 1.6-point gender gap remains in the sex ratio at birth, which lowers the subindex score and places the Philippines among the lowest performers on this indicator. In Political Empowerment, the combined near-16 years during which the government was helmed by Corazon Aquino and Gloria Macapagal-Arroyo, continues to elevate the country's political parity score (37.3%, down from 40.9% in 2023), despite the lower levels of parity in ministerial roles (35.7% to 21.1%) and no progress on parliamentary seats (37.6%).

Building on progress across 18 editions, **Mexico** (33rd) has closed 76.8% of its gender gap and posted its highest score to date, maintaining its rank compared to 2023. The score represents a +0.26 percentage-point improvement from 2023, and a +12.2 percentage-point advancement since 2006. The score improvement compared to 2023 is due to slight improvements on the economic participation dimension, in particular when it comes to closing the gap in the labour-force participation rate and wage equality for similar work. The basis for Mexico's overall performance derives from strong results in the Economic Participation and Opportunity and Political Empowerment pillars. Women have equal representation at the parliamentary level, resulting in a 100% gender parity score. The country has also closed 72.7% of its ministerial gender gap. Across both the

Educational Attainment and Health and Survival subindexes, Mexico has achieved full parity in sex ratio at birth and secondary and tertiary education enrolment. It is crucial to note that the shares of women enrolled in tertiary education and secondary education have approximately doubled since 2006. Economic Participation and Opportunity parity stands at 61.2%. The share of women in professional and technical roles is near parity (98.1%), and parity in senior leadership roles is comparatively high, at 63.3%. Through the past 18 editions, gender parity in labour-force participation has increased overall by +10.3 points, reaching a high point of 60.6% in 2024. Similarly, women's estimated earned income has increased since 2006 at a higher rate than men's.

Ranked 43rd on the 2024 index with a score of 74.7%, the **United States** experiences no change to its overall placement in 2023, recording a marginal -0.15 percentage-point reduction in its score. The United States has closed three quarters (76.5%) of its Economic Opportunity and Participation gender gap, a -1.5 percentage-point reduction from its previous score (78%). This is despite attaining 100% gender parity in professional and technical workers, and having high levels of parity in labour-force participation rate (84.2%). While women's labour-force participation rate (57.3%) has been recovering from 2022 values, it remains the third-lowest registered across editions. At a senior leadership level, women continue to be underrepresented, as the 74.1% score indicates. Further, the United States still has over one-third of the income gap to close, with a score of 65.8% and a drop on this indicator compared to 2023 as well as a drop in perceived wage equality for similar work. In the Political Empowerment subindex, the United States improves marginally due to a slight increase in the percentage of women in parliament, with an overall score of 25.1% in political parity. Efforts to close the gap across indicators have been most effective in Educational Attainment, where women's shares of enrolment are higher than men's across all education levels.

With a -1 percentage-point reduction in score (from 72.6% in 2023) and a 13-rank drop compared to last year, **Brazil** places 70th on the 2024 index having closed 71.6% of the gender gap. With 66.7% in economic parity, Brazil experiences a slight reduction from its 2023 score of 67.0%, but maintains parity in professional and technical workers and reaches its highest parity for senior leadership roles (66.1%). Gender parity in labour-force participation rate increases from 2023 by +.7 percentage points to 72.6%, although it remains -4.5 points below Brazil's best result (77.2% score, 2021). In Political Empowerment, Brazil tracks alongside the global average, with a score of 22%, down from 26.3% in 2023 mainly due lower female representation at ministerial level. Nonetheless, Dilma Rousseff's term as head of state continues to leverage Brazil's score (12%) to 34th rank in the head of state indicator, and by consequence, the subindex. Yet, not all subindex results are

regressive. In Educational Attainment, Brazil attains effective parity at 99.6%. This result is buttressed by 100% parity across all indicators, except for primary enrolment – here, parity has been increasing, but has not yet reached 100%. There is no change in the Health and Survival subindex, which maintains a score of 98%.

In 2024, **Viet Nam** (72nd) reduced its gender gap by a further +0.3 points, posting a 71.5% gender parity score – higher than the global as well as regional average for Eastern Asia and the Pacific, but ultimately insufficient to propel it upwards in rank. Since 2007, Viet Nam has bridged its gender gap by +2.6 points. In the Economic Participation and Opportunity subindex Viet Nam sees gender parity rise from 74.9% in 2023 to 75.1% in 2024, making it a leading performer in its region. The result reflects a combination of full parity in professional and technical workers and nearly-closed gaps in estimated earned income (79.9%) and in labour-force participation rate (88.1%). Nonetheless, the share of women's labour-force participation rate has been diminishing in Viet Nam, and in 2024 is nearly -11.4 points below its highest value (68.5% vs 79.9% in 2017). Another significant gender gap that Viet Nam has yet to close is that of women's representation in senior leadership roles, where parity stands at 35.1%. In the Educational Attainment subindex Viet Nam records parity in secondary and tertiary education and continues to improve gender parity in the literacy rate, with its highest score to date (97.8%). In Political Empowerment, Viet Nam (16.8%) trails behind its peers, with low levels of female representation in ministerial roles (11.1%), resulting in a low parity score of 12.5%. Women make up less than half of parliamentary seats, yielding a 44.1% parity score.

With a gender parity score of 70.9%, **Ethiopia** ranks 79th on the 2024 index. This represents a four-rank and 0.19 percentage-point decline from its 2023 index results. Subindex results only see marginal changes compared to last year, with the exception of political empowerment which drops by almost 2 percentage points due to lower representation of women in ministerial positions (score drop from 69.2% in 2023 to 57.1% in 2024). In the Economic Participation and Opportunity subindex, the country exhibits the sixth-lowest score in Sub-Saharan Africa and 118th globally, at 58.7%. This score is in part explained by a series of persistent economic gaps across indicators. Gender parity in the labour-force participation rate stands at 72.7%, unchanged from 2023, but a full -18.7 points lower than its best score (91.4%, 2011), and a reflection of the decline in women's labour-force participation rate to its second-lowest value since 2006 (57.6%). In addition, gender parity in legislator, senior official, and managerial roles remains at 34.1%, slightly below its best score. However, the share of women in professional and technical roles slowly increases (34.3%) and with it, gender parity (52.1%). On the educational front, Ethiopia trails behind 135 economies, with 86.5% parity in attainment. Gender parity in literacy only

reaches 75%, and 93.1% and 97% in primary and secondary enrollments, respectively. However, parity in tertiary education enrollment registers a slight +0.2 point increase to 59.8%. Health and Survival subindex parity remains at 97.1%, though parity in healthy life expectancy has declined slightly since 2015, contributing to an overall subindex score reduction. In the Political Empowerment subindex, Ethiopia scores 41.2%, significantly above the global average and boosted in part by the ongoing five-year consecutive term of Sahle-Work Zewde serving as head of state. In other areas of political representation, results are mixed: women hold 36.4% of ministerial roles and 41.3% of parliamentary seats.

Experiencing a decline in both score (68.9%) and rank (99th) since 2023, **Bangladesh** loses 40 ranks and -3.3 percentage points on the 2024 index. The drop derives to a large extent from an update to the 2017 values for economic indicators used in prior calculations, including the 2023 edition of the report. In the past five years, economic gender parity has deteriorated significantly, leaving Bangladesh with a wider gender gap to close. In 2024, the economic parity score of 31.1% is the lowest achieved by Bangladesh since 2014 and the lowest ranking globally in the 2024 index. Gender disparity in labour-force participation has rolled back the gender gap from 42.5% in 2018 to 30.7%. Income inequality between men and women in 2024 (10.2%) has increased nearly five times over since 2018 (48.9%) in 2018. Women's representation in senior leadership roles has also decreased, resulting in a 92 percentage-point gap to bridge. Additionally, in 2024 women encompass just one-fifth of professional and technical workers, resulting in a 25.4% parity score. Where Bangladesh performs well is in Educational Attainment, with a 94% attainment rate reflecting full parity in secondary enrolment, gender parity in literacy rate of 93% and gender parity in tertiary enrolment of 84.1%. In Political Empowerment, Bangladesh has the highest gender parity score in its region (54.3%) and seventh overall, on account of having had women in head-of-state roles for 30.3 years out of the last 50. However, there is only one-woman minister for every nine men (score of 9%) and women occupy just one-fourth of parliamentary seats, which translates to a gender parity score of 25%, with slight drops on both indicators compared to 2023.

The 100th rank in the index is occupied by **Indonesia**, which in 2024 has closed 68.6% of the gap. This result represents a 13-rank decline and a -1.1-point reduction from 2023. The decline is relative and due to the unavailability of data for women in parliament at the time of report production. However, when considering progress to date since 2006, Indonesia has succeeded in reducing its gender gap by +3.2 percentage points overall, despite mixed progress at the subindex level. Economic parity reaches 66.7%, placing it 89th overall, evidencing significant gaps at the indicator level. One such indicator is the labour-force participation rate, where gender parity

reaches 64.5%. While women are overrepresented in professional and technical roles to the extent of full parity, the opposite is true for legislative, senior official, and managerial positions, where parity is at 46.3%. Furthermore, women's estimated earned income is just half that of men's, resulting in a parity score of 51.7%. In the Political Empowerment subindex, Indonesia scores 13.8%, with parity at the ministerial level remaining static from 2023 at 26.1%. In Educational Attainment, Indonesia compensates with 97.1% parity, with parity evident in secondary and tertiary enrollment. However, gender parity in primary education enrollment has been decreasing since 2015 as men's enrolment shares have increased, rolling parity back to 94.9% in 2024. Literacy rates remain high at 97%. In terms of Health and Survival, Indonesia achieves 97% parity, ranking the country 72nd in the global index.

In 106th position is **China**, bridging 68.4% of its gender gap in 2024. Since 2023, China has improved by one rank and +0.5 percentage points with positive changes on the economic participation, health and survival and political empowerment dimensions. In terms of Economic Participation and Opportunity, China ranks 39th overall with a score of 73.7%, an improvement of 6 ranks and 1 percentage point from 72.7% in 2023. At the indicator level, labour-force participation parity stands at 81.5%, ranking 61st overall. Although women's labour-force participation rate has recovered from 2022 levels, it remains -13.4 percentage points below its highest recorded value of 77.1% in 2009. Educational Attainment reaches 93.4%, with a literacy rate score of 96.6%, although men's literacy rate is +3.4 percentage points higher than women's. At the secondary education level, there is a 12.7% gap to bridge. However, China achieves full parity in tertiary education enrollment, with women surpassing men in enrolments. Health and Survival scores 94%, with a sex-at-birth ratio of 89.4%. Healthy life expectancy stands at 104.2%. Gender parity in the Political Empowerment subindex is 12.3%, with an 111th rank overall. Parity is higher for women in parliament, as they represent one-fourth of parliamentarians in 2024, the highest share to date, yielding a score of 36.1%. Women's representation at the ministerial level has declined to 4.3%, compared to the 11.5% share held from 2010 to 2016 (except for 2014).

In the 2024 Index, **Japan** (118th) makes significant progress from 2023: with overall parity at 66.3%, it improves its position by seven ranks and +1.6 percentage points over last year. This is largely driven by improvements in the Political Empowerment dimension and to a lesser extent positive changes in Economic Participation and Opportunity, where Japan ranks 120th, with a 56.8% economic gender gap yet to be closed. Labour-force participation parity stands at 76.8%, with women's participation slowly increasing from 2022 levels. The share of women in legislative, senior official, and managerial roles in 2024 also increased, by +1.7 percentage points from 2023 and +4.6 percentage points since 2006.

Nonetheless, Japan's gender disparity in senior roles remains significant, with a gender parity score of 17.1%, as men occupy five out of six leadership roles in the country. Estimated earned income also displays considerable disparity based on the 2024 score of 58.3%. This is an improvement since 2016 but still trails -2.6 points behind its highest score, achieved in 2015. In Political Empowerment, Japan ranks 113th overall, with gender parity at 11.8%. Women hold one-fourth of ministerial roles, resulting in a 33.3% parity score, a significant improvement from a share of 8% and score of 9.1% in 2023. In parliament, gender parity stands at 11.5%, showing only marginal movement over time. In Educational Attainment, Japan achieves virtual parity with a score of 99.3% that results from parity in the literacy rate and secondary education enrollment, and near-parity in tertiary education enrollment (96.9%). This performance positions Japan 72nd overall in the subindex. Japan's score in Health and Survival remains virtually unchanged compared to last year, placing it in 58th position.

Nigeria (125th) has climbed five ranks and improved last year's score by +1.3 percentage points, resulting in overall gender parity in 2024 of 65%, with positive changes in the Political Empowerment dimension, Educational Attainment, and Economic Participation and Opportunity. The Sub-Saharan economy has made notable strides in the Economic Participation and Opportunity, where it records 72.6% of the gap closed, placing it 49th globally on the subindex. Notably, Nigeria excels in gender parity for senior leadership roles, achieving full parity, with women's representation in legislative, senior official, and managerial roles doubling that of men's. However, significant gender gaps persist in professional and technical workers, with parity at only 62.6%, as well as in estimated earned income, which stands at 50.1%. With relatively high labour-force participation rates for both men and women, parity on this indicator stands at 89.9%, ranking 13th highest overall. In Educational Attainment, gender parity reaches 84.2%, resulting in Nigeria placing just eight ranks above the lowest performer. A persistent gender gap is observed in literacy rates (73.9%), with women lagging far behind men. Secondary education enrollment parity is 98.9%, while tertiary education enrollment reaches 72.6%. In Health and Survival, Nigeria scores 96.7%; it achieves the highest score in sex ratio at birth but lags in parity in healthy life expectancy. In Political Empowerment, Nigeria ranks among the bottom 10 performers (136th) with a parity score of 6.6% but improvements in particular on ministerial positions since 2023, with women's representation rising from 10.7% in 2023 to 17.6% in 2024 (score change from 12% to 21.4%).

With a population of over 1.4 billion, **India** (129th) has closed 64.1% of its gender gap in 2024. This result places the Southern Asian economy -2 ranks lower than the previous edition, with a marginally lower score (0.17 percentage points). This slight regression is mainly the result of small declines in Educational Attainment and Political Empowerment,

while Economic Participation and Opportunity slightly improves. While India's economic parity score has trended upwards for the past four editions, it would need a further 6.2 percentage points to match its 2012 score of 46%. Achieving that objective will be possible through bridging gender gaps in estimated earned income (28.6%); legislative, senior officials, and management roles (14.4%); labour-force participation rate (45.9%); and professional and technical workers (49.4%). In the Political Empowerment subindex, India scores within the top-10 on the head-of-state indicator (40.7%). India's scores for women's representation at the federal level, in ministerial positions (6.9%) and in parliament (17.2%), remain relatively low. Parity in Educational Attainment is well underway, but challenges remain. Updated figures in Educational Attainment bring India's parity levels slightly down from prior scores. While the shares of women are high in primary, secondary and tertiary education enrolments, they have only been modestly increasing, and the gap between men and women's literacy rate is 17.2 percentage points wide, leaving India ranked 124th on this indicator.

In 135th position is **Egypt**, which has dropped -1 rank from 2023 – despite maintaining a positive trajectory since 2017 and recording in 2024 a 62.9% gender parity score, +.26 percentage-points up from 2023. A small decline in the Economic Participation dimension compared to 2023 is slightly more than offset by score improvements in Educational Attainment and Political Empowerment. Egypt faces substantive challenges to economic parity across indicators. The gap in its labour-force participation rate is 78.3 percentage points wide, similar to estimated earned income, where gender parity stands at 20.9%. In senior leadership roles, gender parity in legislators, senior officials and managers barely reaches 16.2%. Yet, slow progress on this indicator is apparent; the 2024 value is the highest registered since 2006, reflecting an also growing share of women in this category (+5 percentage points from 2006 values). In contrast, Egypt is among the four leading regional performers in the Political Empowerment subindex, behind only Algeria, Tunisia, and Morocco. Egypt is among the five countries in the region where parity at the ministerial level surpasses 20% (23.1%) and has the highest regional parity score for women in parliament (38.3%). In Health and Survival, Egypt achieves 96.8% parity, maintaining its 2023 score. The country ranks 110th overall in the Educational Attainment subindex with a slight score improvement compared to 2023, having closed 96.6% of its educational gender gap. The country records parity in primary and tertiary education enrolments, but is behind in literacy rate, at 86.2% and loses slightly on parity in secondary education (99% in 2023 to 96.5% in 2024).

The **Democratic Republic of Congo** ranks 140th in the 2024 index, with the state of gender parity in the country slightly receding to 60.9% from 61.2% in 2023 (-0.2 point decrease). Marginal regressions are apparent for the Economic Participation

and Opportunity and Political Empowerment dimensions. The majority-female Sub-Saharan economy, with a population of 100 million, faces its largest gender-parity challenge in the Political Empowerment subindex. While the subindex shows a positive trajectory overall, only 10.9% of the gap has been closed to date (-0.2-point decrease from 2023). Gender parity at the ministerial level has increased since 2018, by +12.6 percentage points, pushing parity to 25.7% – yet it remains 20 places and 74.3 percentage points behind the region's best performers (South Africa and Mozambique, both at 100%). At the parliamentary level, Democratic Republic of Congo has the fifth-lowest regional score (14.7%) placing it 125th overall. In Economic Participation and Opportunity, Congo has closed 66.9% of its gender gap, yielding a rank of 85 on this dimension. There are high levels of parity in labour-force participation, at 90.3% parity score, as well as women in senior roles (72.2% parity score) where the share of women in this category has more than doubled since 2018. Where economic gaps remain are in professional and technical workers (43.3%) and in estimated earned income (69.3%). Finally, in the Educational Attainment subindex, the country faces important gaps, placing second from the bottom in 145th rank. In secondary and tertiary education enrolment, gender parity reaches 63.4% and 59.3%, respectively. Women's literacy rate is significantly lower than men's, resulting in an 80% gender parity score.

With a female population of over 119 million, **Pakistan** comes second to last on the 2024 index (145th), having closed 57% of its gender gap. Compared to 2023, the economy loses three

ranks and 0.53 percentage points on its overall score, largely driven by regressions in the Political Empowerment dimension, yet partially offset by a small score improvement in Educational Attainment. The low performance reflects substantive gender gaps in economic and political parity, as well as a lag in both the Educational Attainment and Health and Survival subindexes, where most economies are at parity. The Southern Asian economy has closed just over one-third of its economic gender gap, at 36%. At the indicator level, the gap is widest in senior leadership (6.1% score), with legislators, senior officials and managers making up less than 6% of the total. Income disparity yields a gender gap that is 75.1 percentage points wide, one of the biggest overall (136th). While Pakistan's parity in labour-force participation rate is comparatively higher, it remains among the lowest overall (30.4%, 140th). Despite showing a positive trajectory on Educational Attainment since 2006, Pakistan is yet to catch up to the majority of economies in the subindex (139th). The biggest challenge lies in closing its literacy rate gender gap, which is 67.1%. With increasingly higher parity scores in primary (87.6%), secondary (84.3%), and tertiary education enrolment (92.6%), as well as growing shares of female enrolment across indicators, efforts are seemingly showing impact but at a slower pace than in other economies. Finally, in the Political Empowerment subindex, Pakistan shows 6.3% parity at the ministerial level, and 19.3% in parliamentary seats leaving the country in 112th rank overall.

2

Economic and leadership gaps: constraining growth and skewing transitions

This chapter offers insights into the complex picture of economic gender disparities, equipping decision-makers to address gender gaps in a targeted and transformative manner. The first section provides an outlook of the current global economic and regulatory context which is shaping gender parity outcomes. The second section provides a more focused analysis of global workforce dynamics, leadership trends and skill development across

various industries and over time. Building on the 2023 report, the chapter provides continued tracking of key labour-market outcomes, particularly in the face of technological transitions, as well as novel explorations of underlying layers contributing to gender gaps, including patterns in professional networks, care provision and perceptions of opportunity.

2.1 Economic and political context

Investing amid crisis: The challenges of the current macro-environment

The progressive breakdown of political, environmental and economic configurations is creating high-risk, high vulnerability conditions for women and girls, in turn diminishing prospects of a global recovery. The unequal participation of women in the global economy will only worsen an already suboptimal long-term growth rate: the World Bank's January 2024 *Global Economic Prospects Report* predicted that the latter years of the current decade will be characterized by the slowest GDP growth rate in 30 years.¹ Moreover, rising income inequality in both advanced and emerging economies increases the vulnerability that low-income women and girls face in the context of climate change and ongoing political stagnation.

Already in 2022, an estimated 15% of women worldwide were living within 50 kilometres of armed conflict² – a condition that contributes to the worsening of women's outcomes in health, economic participation, educational attainment and political empowerment. Climate crises are also becoming numerous and frequent and are deemed to increase a range of inequities – from women's reproductive health outcomes³ to potentially pushing nearly 158 million women and girls into poverty in the next 25 years.⁴

While the threat of continued downturns and prolonged crises are a worrying prospect for gender parity, global efforts to close the gender gap should be motivated by the boundless possibilities offered from increased economic and leadership parity. International financial institutions have noted the economic gains that could be reaped from enhanced female participation in labour markets and economies. The World Bank estimates that closing the gender gap in employment and entrepreneurship could increase global GDP by more than 20%,⁵ while the International Monetary Fund (IMF) has categorized the correction of the “misallocation” of women's talents and abilities as a method for boosting productivity.⁶

The COVID-19 pandemic produced a precipitous decline in global economic activity, which led to reduced government revenues.⁷ In parallel, almost all governments injected large fiscal stimuli into economies.⁸ While public spending levels of 2020 fell rapidly in 2021 and 2022,⁹ high debt levels and interest payments – particularly for low- and middle-income countries – are increasingly a concern.^{10,11} The growing cost of debt service threatens to erode fiscal space needed for investment into educational, retraining and reskilling, and childcare programmes associated with higher rates of women's labour-force participation.¹²

The estimated investment required for achieving gender equality for all developing economies

could reach up to \$7.8 trillion per year, according to the United Nations Conference on Trade and Development (UNCTAD). The estimated collective financial investment required to achieve this goal by 2030, at the current rate of government expenditure, would be \$360 billion per year.¹³ The necessary level of financial effort requires a fundamental shift in mindset for economies, understanding gender parity efforts as engines for new, high-quality growth.

Business, in turn, has shown a mixed approach to advancing gender parity in the current economic and political context. While diversity, equity and inclusion (DEI) spending and policies have seen retrenchment in some parts of the world due to political polarization and economic pressures, in many regions, including Latin America, the Middle East, and East Asia, gender parity efforts are gathering momentum. In Northern America and Europe, companies which have long been committed to DEI have been staying the course, continuing to proactively address gender gaps in their workforce, across business functions and in their wider ecosystems. Experiencing the benefits of increased productivity, adaptability to change, returns on investment and stronger innovation outcomes, they are starting to see gender parity as a competitive advantage in an increasingly tough macro and business environment. At the same time, though, beyond the DEI frontier the aggregate picture across all firms still shows systematic regression in parity as economic conditions worsen (see following sections).

Blueprints for change: Developments in global gender policy

According to the World Bank, in 2024 men continue to enjoy more legal protections than women. For this reason, developments in the adoption of gender policies across economies cannot be minimized or dismissed, especially since implementation gaps are widespread. A clear example of this emerges in economic gender policy. Since 1971, the number of countries that have adopted pay equity laws has increased from 2 to 98, with regional differences in uptake of such laws. However, only one in five economies that have legislated equal pay for equal work have also implemented mechanisms to redress the pay gap.¹⁴

Most governments have yet to make gender a systematic feature and focus of their budgetary cycle. Since the 1984 launch of the first gender budget initiative in Australia,¹⁵ the uptake in efforts has extended to over 100 countries.¹⁶ However, while over 90% of countries examined by a recent UN Women report having policies and programmes to address gender equality, only 53% of them also report having sufficient resources allocated for that purpose.¹⁷ What is more, only a minority of countries present government expenditures by gender, obscuring potential cues to how the bulk of government spending can address gender gaps.¹⁸

FIGURE 2.1 Share of economies with laws regarding equal pay in 2024, by region

Note

Values for 145 economies included in the Global Gender Gap Index 2024, except for Norway, for which no values were available. Data derived from the *Women, Business, and the Law* pay equity indicator that corresponds to the question "Does the law mandate equal remuneration for work of equal value?". Recovers the WBL Pay Equity indicator "Does the law mandate equal remuneration for work of equal value?".

Nonetheless, 2023 did see policy developments on key issue for economic parity: the care economy. In October, the UN General Assembly adopted a landmark resolution on the centrality of care and support from a human rights perspective.¹⁹

In Latin America, the Interamerican Court of Human Rights has since discussed the right to care, contributing to broader recognition of the economic relevance of care.²⁰

2.2 Evolving gender gaps in the global labour market

In the spring of 2024, the short-term global economic outlook shows signs of reserved optimism. The IMF has revised its global 2024 growth projections to a slightly improved 3.1% on account of economic resilience. While economic slowdown is underway in large economies, fiscal consolidation measures are expected to be reduced or at least delayed beyond 2024 – resulting in a potential increase in public expenditure and with it, economic activity. Inflation is expected to soften, although neither systematically across economies nor permanently. This economic configuration can impact gender parity in an array of ways. Lower inflation and increased government expenditure can expand economic possibilities for women, especially when constrained by lower-paying jobs and sectors.²¹

Labour-force participation rate

Continuing a pattern of recovery that was highlighted in last year's edition, parity in the labour-force participation rate has rebounded past 2023 levels (63.5%) to reach 65.7%, based on

the constant sample of 101 economies tracked since 2006, as shown in Figure 2.2. However, segments of the global workforce were affected disproportionately during pandemic years, leaving behind what the International Labour Organization (ILO) has deemed “pockets of missing workers” in low-income economies.²²

In the United States, the number of women in the job market hit a historic high. The U.S. Department of Labour identified remote work as a key driver of women's return to the workforce, particularly for working mothers. However, the lack of fully functioning childcare systems curtails optimism associated with this development.²³

At the regional level, the effect is visibly positive for Southern Asia and Sub-Saharan Africa, where gender parity values rise to 42.6% and 83.9%, respectively, in 2024, suggesting parity in labour-force participation is recovered or nearly recovered from shocks that happened at the turn of the decade. In both regions, women's participation rate in the labour force has increased in greater proportion than men's since 2020.

FIGURE 2.2 Global gender gap in labour-force participation, 2006-2024

Global Gender Gap Report, 2006-2024.

Note
Results of the fourteenth edition of the Global Gender Gap Index were presented in the *Global Gender Gap Report 2020*, released in December 2019. There is no corresponding edition for 2019.

In Northern America and Europe, where gender parity in labour-force participation rate has been comparably higher, the recent upturn shows a moderate improvement since 2022, reaching 84.6% and 77.4% respectively. This is linked to men's labour-force participation rate increasing modestly in Europe, while remaining flat in Northern America since 2021. However, the upwards push in women's workforce participation has not been large enough to reach prior levels of progress. In Middle East and Northern Africa,

gender parity in labour-force participation rate is lowest of all regions (28%) on average and has been in decline since 2019, when it reached 30.8%. This reflects a significant drop in female participation rates prior to 2020 that have only since begun to increase. Exceptions are Saudi Arabia, where female labour-force participation has nearly doubled over time, from 22.5% in 2006 to 43.2% in 2024, as well as Bahrain and the UAE which have also seen significant increases since 2006.

Employment and job gaps

Employment rates are mirroring positive developments in women's labour-force participation. In the OECD area, 2024 employment rates reached record numbers for both men and women. Women's employment rate increased at a faster rate than men's, leading to a reduction in the gender gap.²⁴ In Europe, the profile of the labour force has also shifted to include a larger share of female, older, highly educated workers. Labour mobility in the eurozone, subsidized childcare and family leave policies, job-retention schemes, and delayed retirement are among the factors considered to contribute to this outcome.²⁵

While positive strides in employment are encouraging, the sustainability of such progress remains uncertain. The ILO cautions that global unemployment is expected to rise in lower-income economies, potentially leading to heightened poverty rates.²⁶

Moreover, the ILO has continued to underscore the need to address the gendered jobs gap, a recent indicator developed by the organization that describes individuals seeking employment that do not have a job – including unemployed, potential labour force and those willing to work but not available at short notice.²⁷ As women are often more constrained in the speed at which they can take up new employment opportunities

(e.g. due to care obligations), they are less likely to be considered as unemployed based on current criteria but remain in the pool of those experiencing a job gap. Initial ILO estimates were included in the 2023 edition of the *Global Gender Gap Report*, evidencing how the jobs gap rate was significantly higher for women. The most recent ILO estimates suggest that while gender parity in the jobs gap measure has stayed relatively stable in 2024, the absolute proportion of women experiencing a jobs gap is much higher than initially projected, at 21% (vs 14.5% projected for 2023) while the rate for men is 14% (vs 9.8% projected for 2023).²⁸

Workforce representation and leadership

Breaking down global labour-market data to the industry level, data provided by LinkedIn shows that in 2024 women’s representation in the workforce remains well below men’s, across almost every industry and economy analysed.

The sample, which consists of LinkedIn users across 166 economies, indicates that women account for 42% of the global workforce (compared to a 40.5% global average based on ILO reported figures; it should be noted that LinkedIn captures only a segment of the global labour market).²⁹ LinkedIn data for the past eight years shows that women’s overall representation in the workforce has slightly decreased in the past two years, regressing to 2018 levels (Figure 2.4).

By comparison, women’s representation in senior leadership has fared slightly better, with a less pronounced drop compared to previous years (Figure 2.4). LinkedIn data for the past eight years shows that women increased their representation in leadership, from a 30.4% share in 2016 to a 32% share in 2023. However, data for the first quarter of 2024 suggests an early -0.3-point reduction in representation, bringing the share of women in leadership down to 31.7%.

FIGURE 2.4 Women's workforce representation, overall and in senior leadership 2016-2024

Source
LinkedIn Economic Graph.

Note
Average values for 166 economies with at least 100,000 LinkedIn members.

Differences in the gender composition across different industries’ overall workforce and leadership continue to contribute to women’s segregation across industries.

In 2024, women make up most workers in Healthcare and Care Services (62.1%), Education (54.4%), Consumer Services (53.1%), and Government and Public Sector (50.7%). In contrast, women have the lowest presence in Utilities (31.5%); Supply, Chain and Transportation (31.6%); Oil, Gas, and Mining (24.1%); and Infrastructure (22.4%).

Comparing women’s representation across industries over time shows there has been an overall positive evolution since 2016 (Figure 2.5). The share of women in the following industries has grown incrementally: Government and Public Service (from 48.3% to 50.7%), Professional Services (from 40.2% to 41.4%), Infrastructure (from 21.3% to 22.4%), Education (from 53.3% to 54.4%) and Utilities (from 30.5% to 31.5%).

However, women’s share of the workforce has been trending slightly downwards at the aggregate level since 2023, and in eight industries since

2022. Between 2023 and 2024, the industries which experienced the greatest decline in women's workforce participation were Accommodation and Food (from 44.2% to 43.5%), Consumer Services (from 53.7% to 53.1%), Wholesale (from 33.3% to 32.7%), Real Estate (from 42.2% to 41.7%) and Retail (from 49% to 48.5%).

Women's representation in senior leadership has seen modest improvements since 2016, with more women in senior leadership across every industry in 2024 than in 2016 (Figure 2.5). Over this period, the

share of leadership roles held by women saw the largest increases in Government and Public Services (from 39.4% to 41.8%), Professional Services (28.1% to 30.3%), Utilities (22.5% to 24.8%) and Financial Services (from 27.5% to 29.7%). Despite the progress recorded between 2016 and 2024, the period between 2023 and 2024 saw moderate declines across all industries, with relatively more pronounced changes in Consumer Services (from 42.1% in 2023 to 41.6% in 2024), Retail (from 35.3% to 35%), Technology (from 26.7% to 26.4%) and Wholesale (from 23.1% to 22.8%).

FIGURE 2.5

Note

Average industry values for 35 economies: Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, Colombia, Denmark, Finland, France, Germany, India, Ireland, Israel, Italy, Mexico, Netherlands, New Zealand, Norway, Panama, Philippines, Poland, Portugal, Puerto Rico, Romania, Singapore, South Africa, Spain, Sweden, Switzerland, United Arab Emirates, United Kingdom, United States and Uruguay.

One significant implication arising from the unequal proportion of women across industries is its reinforcement of other gender disparities in the workforce. Disproportionate representation of women in certain sectors has been documented as one of several factors contributing to gender pay gaps. In industries where women account for a higher share of the labour force, pay tends to be lower.³⁰ The reverse is also true: industries in which women are less represented tend to be higher-paying.

Women's concentration in lower-paid industries, in combination with women's lower representation in leadership roles, is a disadvantageous coupling of conditions affecting women's access to economic prosperity and opportunity to build wealth throughout their working lives. Top-level positions remain narrowly accessible for women, globally speaking, illustrated by the disaggregation of data by seniority levels in the metric introduced in the last edition as the global "drop to the top".

FIGURE 2.6

Global workforce representation of women, by seniority, as of April 2024

Source

LinkedIn Economic Graph.

Note

Values for 160 economies with at least 100,000 LinkedIn members.

In 2024, the ascent to the C-suite globally is steeped in deeply entrenched inequalities, resulting in an overall -21.5 percentage point drop from the base to the top. Women make up 46% of entry-level roles, a figure that has remained stable since 2023 and remains virtually unchanged in 2024.

Globally, while women are close to occupying nearly half of entry-level positions, they fall short of representing just one quarter of C-suite roles. Across all industries, career progression remains limited, although the trend exhibits industry-specific patterns.

FIGURE 2.7

Industry representation of women, by seniority, as of April 2024

Source
LinkedIn Economic Graph.

Note
Average industry values for 16 economies: Australia, Brazil, Canada, France, Germany, India, Ireland, Italy, Mexico, Netherlands, Singapore, Spain, Sweden, United Arab Emirates, United Kingdom and United States.

Industries with a majority female entry-level workforce exhibit relatively lower drops in female representation at the highest levels of organizations (Table 2.1). Consumer Services, Education, and Government and Public Sector are the three industries in which it appears relatively easier for women to climb, as C-suite-to-entry-level ratios are relatively high, at 62%, 59% and 59%, respectively.

Of the female-dominated industries, Healthcare and Care Services exhibits the sharpest drop to the top (54%): over half of the female talent at the base (67.4%) does not reach the highest levels within the industry (36.7%). The sectors where women undergo a more significant drop are Real Estate (C-suite-to-entry-level ratio of 43%), Financial Services (44%), and Supply Chain and Transportation (46%).

Note

Average industry values for 16 economies: Australia, Brazil, Canada, France, Germany, India, Ireland, Italy, Mexico, Netherlands, Singapore, Spain, Sweden, United Arab Emirates, United Kingdom and United States. Data presented in the graph is organized in descending order based on the ratio of women's representation in both entry-level and C-suite positions.

Women's progression across the career ladder often reflects broader shifts in organizational attitudes towards workforce parity, which are discernible from the evolution of women's recruitment into leadership roles.

Past editions of the report celebrated a promising trend in the increased hiring rate of women into leadership roles in the lead to, and during the first years of, the COVID-19 pandemic. After reaching a hiring rate of 37.5%, the positive trend began to deteriorate in 2023. As Figure 2.8 shows, the last

two years have shown that an increasingly smaller proportion of leadership hires are women, bringing both the 2023 hiring rate (36.9%) and the early 2024 hiring rate (36.4%) below 2021 levels.

The change in sectoral hiring rates since 2016 shows that the retrenchment is common across most industries. Only in four industries have hiring rates for women in leadership remained neutral or positive since the last edition: Utilities; Oil, Gas, and Mining; Hospitals and Healthcare; and Accommodation and Food Services (Figure 2.9).

Recent research by LinkedIn suggests that there exists an important relationship between hiring rates of women into senior leadership and macro-economic conditions which can explain the regression in hiring rates observed over the last two editions of the report.³¹ The authors find that worsening labour-market conditions are systematically associated with smaller shares of senior leadership hires being women.

The relationship is especially pronounced in industries with under 50% female representation

in the workforce and is not the result of fewer women applying to such roles. Figure 2.10 illustrates this heterogeneity in the labour market tightness-hiring rate relationship across industry and country contexts with varying levels of women's representation. The effect is most pronounced in industries such as Oil, Gas and Mining as well as Construction. These results suggests that the higher women's representation in the workforce is, the greater the resilience of progress achieved.

FIGURE 2.10 Female representation and labour-market tightness

Lara and Baird, 2024.

Note
The higher the elasticity, the more negative will be the impact of an economic downturn on the rate of women being hired into senior leadership.

Leadership representation in government

2024 has been deemed to be the “biggest global election year in history”, with the largest global population in history coming to vote in over 60 national elections, including some of the world's most populous economies: Bangladesh, Brazil, India, Indonesia, Mexico, Pakistan and the United States.

Across economies included in the 2024 Global Gender Gap Index, there are 25 women heads of state in office across 24 economies.³² Uniquely, in Barbados, both the prime minister and president positions are held by women. Between March 2023 and March 2024, the representatives of Finland, France, Hungary, Nepal, Singapore, Trinidad and Tobago, and Tunisia left office. During the same period, only two women assumed head-of-state roles in Latvia and Trinidad and Tobago. Notably, in Trinidad and Tobago, a female head of state succeeded the outgoing incumbent.

Over the past 50 years, nearly half (47.2%) of economies tracked by the Global Gender Gap Index have had at least one woman in top political office. The longest-serving female heads of state remain Angela Merkel of Germany, Vigdís Finnbogadóttir of Iceland and Sheikh Hasina of Bangladesh, each serving over 15 years. Among top political leaders leaving office in 2023, burnout was cited as a contributing factor by Jacinda Ardern, Sanna Marin and Nicola Sturgeon. This is an element worth noting on account of the growing notice on the effects of political violence against women in political parity,³³ as well as the fact that over half of the global population reporting gender bias against women in political leadership, according to UNDP.³⁴

Gender parity at the parliamentary level stands at a record high of 33% in 2024, having nearly doubled since 2006 (18.8%). At the regional level, Latin America demonstrates continuous improvement over time, while Central Asia shows declining parity rates in recent editions. Some of the economies exerting influence over the overall positive global trajectory include United Arab Emirates, which has

FIGURE 2.11

Gender parity in parliamentary seats, by region

2006-2024

Global Gender Gap Index, 2006-2024.

Note

Results of the fourteenth edition of the Global Gender Gap Index were presented in the *Global Gender Gap Report 2020*, released in December 2019. There is no corresponding edition for 2019.

maintained parity since 2021, followed by Costa Rica, which has recorded a parity score of 90% for the past three editions. Bolivia, Denmark and Spain have also reached parity levels of over 80% on this indicator in 2024.

At lower levels of political leadership, women's hold in decision-making is increasing. United Nations data shows that the share of women elected to local government has been rising slowly in the past four years, from 33.9% to 35.5% in 2023. Out of the economies reporting 2023 values for this indicator following elections in 2022, those with the highest proportion of women participating in local government are Iceland (51.3%), Senegal (47.2%) and Sweden (44.2%).³⁵ Across the same subset of economies, only in Jordan, Bahrain and Oman did the share of women in local government diminish significantly, by -6.9, -3.3, and -2.7 percentage points, respectively.

World Economic Forum calculations find that increases in women's representation in local government and legislatures, as well as economies political parity scores, are in part driven by quotas. The trend will be tested anew in 2024 across 47 parliamentary chambers that are holding elections and use gender quotas.³⁶

The following section provides new insights into some of the layers underlying the outcomes described in the preceding sections. Two factors in particular which are critical for positive career trajectories, professional networks, and support in the provision of care, are examined in more detail below.

The role of professional networks

Gender parity in the workforce can be advanced formally, by design: for example, through implementing quotas, targets and policies to drive up representation. However, informal factors also influence promotion, retention, and progression into leadership. Professional networks are essential in this context, as they provide immaterial resources and capital to bridge professional gaps. Economic networks create benefits not just for individuals, but also for organizations, industries, and economies at large. Networks are considered important to provide access to job, mentorship, and sponsorship opportunities, as well as exchanges leading to innovation and the adoption of best practices. As such, it is interesting to consider the role professional networks can play in replicating, or subverting, dynamics contributing to gender inequality, such as workforce mobility.

As with other social structures, online networks carry over gender designs that translate to economic opportunity, or the lack thereof.³⁷ Initial explorations into the gender gaps in online professional networks show that in nearly all economies analysed (97%), men have larger LinkedIn networks than women, and in two out of three economies, men make new connections at a faster rate than women (25.7%). Early insights suggest that gender differences are narrowing over time, with women's networks growing in size, albeit at a slower rate than men's.

In addition to differences in size, men's networks also show slightly "stronger" ties between connections (+3.3% closure coefficient) in 70% of economies.³⁸ In comparison, women have more "weak" ties, which have been linked to job mobility;³⁹ similarly, men's networks are more dispersed on average than women's (lower clustering coefficient).⁴⁰ (Figure 2.12) LinkedIn research on United States networks suggests that differences in network strength are driven by, among other factors, occupation and seniority, and impact job and economic outcomes. Stronger networks are associated with increased probability of career progression and receive more recruiter outreach.⁴¹

These findings provide initial insights into the state of gender parity in online networks and offer an overview of opportunity outside of the restraints of traditional networks and their respective, longstanding gender inequities. Advancements in technology are creating new features and opportunities to diversify professional networks. Enhanced job search is facilitating standardized skill listing and recognition, enabling AI engines to match skill profiles to opportunities – including those of non-traditional candidates. Additionally, online platforms offer insights into career trajectories and necessary skillsets for desired roles, providing new avenues to close gender gaps in the labour force.

FIGURE 2.12 Gender gaps in network size and strength

Women's networks are more likely to be characterized as a tighter circle with more weak ties. Their clustering coefficient is higher than their closure coefficient, meaning women's contacts are more likely to be connected to each other, and facilitate connections to other contacts.

Men's networks are more likely to be characterized as spherical. Their closure coefficient is higher than their cluster coefficient, meaning men's contacts are more likely to be connected in different groupings, creating multiple spheres of connection.

Baird, Kavanagh-Smith, Osoba, and Yu. 2024.

The role of equitable care systems

The last two editions of the report explored the hard-hitting effects the pandemic had on women's workforce participation, including how a disproportionate surge in caregiving responsibilities contributed to women's exit from the labour force. With women's-labour force participation remaining lower than men's, the role of equitable care systems becomes a key concern for both government and business as they explore strategies to meet the needs of a changing population beyond existing and insufficient frameworks. New data offering insights into childcare provisions worldwide offers a useful departure point for the analysis of one core issue in care systems.

World Bank data suggest only two thirds (65%) of economies guarantee at least 14 weeks of paid leave for mothers, with fathers also having some form of paid leave in these instances. All European and Central Asian economies meet or exceed

protections for women. However, nearly two-thirds of economies in MENA fall short of guaranteeing minimum leave duration. Additionally, the majority of MENA and Central Asian economies do not provide paternity leave.

Further differences emerge between regions based on how provisions are funded. Benefits that are exclusively publicly funded are only available in 51% of economies worldwide, with the biggest funding gaps happening in 70% of economies in MENA, Eastern Asia and the Pacific and Southern Asia. In the absence of public and private investment in childcare, and under longstanding unequal attitudes towards care activities at large, the economic and social cost of caregiving is borne predominantly by women.

In 2022, businesses estimate that men and women do not participate equitably in caregiving (children or elders) overall, according to World Economic Forum surveys. The perception that men and women spend unequal amounts of time in caregiving is particularly pronounced in Latin America, Sub-Saharan Africa and Southern Asia. The opposite is

true for Northern America and Central Asia, where survey respondents estimate that time spent in caregiving is more gender-equal.

Nevertheless, attitudes and frameworks for care are evolving alongside the growing demand for broader care provision, with governments expanding frameworks and businesses increasing their benefits offer. One example of this shift is evidenced by the state of parental leave benefits. Over the past 50 years, the average number of maternity leave days in 2024 has nearly doubled from 1971, from 63 to 107 in Global Gender Gap Index countries (Figure 2.13). In the same sample, average paternity leave has increased from less than half a day (0.2) to over 9 days. While paternity leave represents a small fraction of maternity leave allocations (9.1%), it has increased more significantly over time, despite the absence of international conventions recommending a minimum paternity-leave allocation such as those adopted for maternity-leave allocations.⁴²

These developments are crucial when considering how leave allocations, in addition to being an essential workforce protection, can be instruments

for improved workforce parity. World Bank research has found that extending the duration of maternity leave is linked to a reduction of women's participation in the workforce. Furthermore, the data suggests that parental parity is in fact positively correlated with higher female labour-force participation. Achieving workforce gender parity, therefore, requires governments and businesses to facilitate for the adoption and exercise of equitable parental leave, ensuring childcare responsibilities are shared equitably.⁴³

For governments, this would mean addressing the policy gap in childcare, which is estimated by the ILO to leave parents without care provision for 4.2 years until children can enrol in school. Businesses in turn would need to increase provision of leave benefits, currently as low as 36% and 31% for mothers and fathers, respectively. Further actions are needed beyond childcare if workers are to be supported as informal caregivers and/or as formal care workers. Global demand for care provision is rising across economies, as is the demand for care workers. As a consequence, the importance of care skills and occupations is also increasing, and with it, the space for investment in the care economy.⁴⁴

2.3 Gender gaps skewing the technology transition

This section offers insights into the gaps that are skewing the ongoing technology transition. It presents a renewed stocktake on the state of parity in science, technology, engineering and mathematics (STEM) leadership, representation, and skilling, and provides granular insights on critical gender patterns shaping the ever-faster development and deployment of artificial intelligence (AI).

Gender gaps in STEM workforce and leadership

Overall, the proportions of women in both the STEM and non-STEM workforce have gradually increased since 2016 (Figure 2.14). However, in 2024 women continue to have lower representation in the STEM workforce than in the non-STEM workforce, with representative shares of 28.2% and 47.3%, respectively. A slight downturn in non-STEM has been observed in early 2024, which is not present in STEM.

The “drop to the top”, illustrated in Figure 2.15, is more pronounced in STEM occupations (C-suite-to entry-level ratio of 42%) compared to non-STEM occupations (46.3%). Between the two, the difference is narrowest – only 6.7 percentage points – at the director level.

From an industry perspective, gender gaps in representation are present across all economic sectors. While there is variability in the shares of women in STEM employment across industries, women are systematically underrepresented in STEM employment in comparison to men (Figure 2.16). Furthermore, women are overrepresented in non-STEM occupations across all industries. This configuration gives women a double disadvantage with regards to technological and workforce transitions, as they continue to occupy the lower-growth, lower-paying jobs that are likely to be negatively affected in the short term.

Gender gaps in AI talent

With technology adoption expected to play a primary role in business transformation in the next five years, employers are increasingly looking for workers with technological literacy and engineering skills.⁴⁵ In this context, the share of AI talent is evolving – albeit with different gender concentrations.⁴⁶ New LinkedIn data offers novel insights into the gendered makeup of AI talent, with a focus on the subset of workers with AI engineering skills.⁴⁷ These skills, used to develop and implement AI systems, are contributing to the development of innovative applications across a range of issues – from comprehensive healthcare analytics to predictive infrastructure maintenance.

For AI Engineering, the concentration of female talent has more than doubled since 2016, from .09% to .2% of LinkedIn's female membership. Male AI talent in 2016 was already tracking higher than women's and has doubled since then (from 0.18% to 0.41%) but has not outpaced the rate of growth for women's talent (Figure 2.17).

The share of women with AI Engineering skills has increased overall since 2016. Yet, female AI Engineering talent as a share of the overall industry workforce has a smaller industry presence than male talent in 2023 – and the differences are most pronounced in Education and in Technology, Information, and Media. However, the sectors with the most significant increases in female concentration over time are Technology, Information and Media, followed by Professional Services and Financial Services (Figure 2.18).

Gender representation within AI Engineering also shows a promising trend. While men and women's concentration of AI talent has been climbing, over the last four years the share of AI talent who are men has decreased with a corresponding increase in the share who are women. Although men still have substantially higher representation for AI talent, the increasing share who are women is a positive signal for improving gender parity. At the industry level, gender parity in AI industry representation has increased gradually in Education; Professional Services; Manufacturing; and Technology, Information and Media. Only in Financial Services has gender parity in AI Engineering declined since 2016.

Gender gaps in the skills of the future

Fostering system-level resilience in the face of evolving job landscapes hinges on empowering individuals to cultivate a diverse array of competencies, spanning both human and technological domains, and ensuring their adept application.

Skills of the future

Men and women are represented disproportionately in STEM skills across economies, likely mirroring the different conditions driving gendered participation in technological transitions. However, these gaps are evolving differently across countries and over time. While more men list STEM skills compared to women, the share of women with STEM skills has increased since 2016 from 24.4% to 27.1% in less

than a decade (Figure 2.19), narrowing the STEM skill gender gap in 62 out of 73 economies.

Skilling choices

Data from PwC reveals that a significant proportion of employees – 68% of men and 62% of women – believe they possess a clear understanding of how their job requirements will transform over the next five years. Moreover, a striking 80% of men and 79% of women reported to actively seek opportunities to expand their skillsets.

However, the proactive stance towards skill development is not without gender disparities, as evidenced by the gender gaps in enrolment rates across different skill categories (Figure 2.20).

Within the realm of soft skills, which are pivotal for fostering effective interpersonal dynamics and organizational cohesion, some degree of gender

parity is evident. According to data from Coursera, in 2024, skills associated with collaboration and leadership exhibit relatively higher levels of gender balance, such as teaching and mentoring (>100%), empathy and active listening (65%), as well as leadership and social influence (65%). However, despite the higher levels of parity, this edition's figures show that parity in enrolment rates has declined almost across the board. From a skill category perspective, the most pronounced losses occur in management skills (-11 points from 2022), in cognitive skills (-11 percentage points from 2022) and in working-with-others skills (-21 points from 2022), which include empathy and active listening (-4 percentage points), leadership and social influence (-5 percentage points), and teaching and mentoring (-13 percentage points). Only engagement skills have remained stable since the last edition, with marketing and media (73%) registering a +1 percentage-point improvement and service orientation (58%) remaining unchanged.

FIGURE 2.20 Gender parity in online course enrolments, by skill
2014-2023

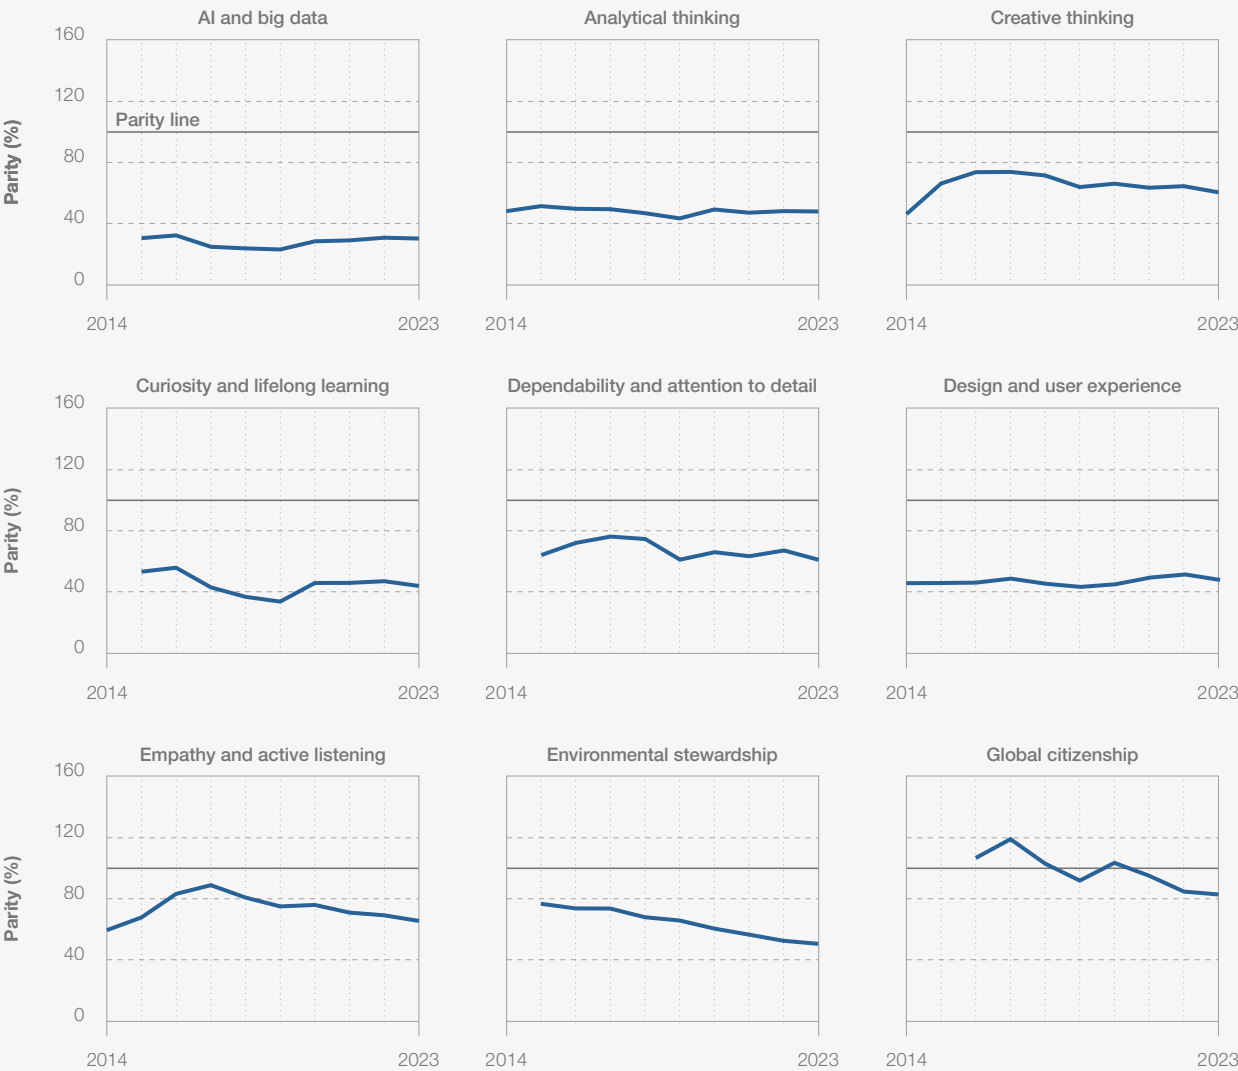

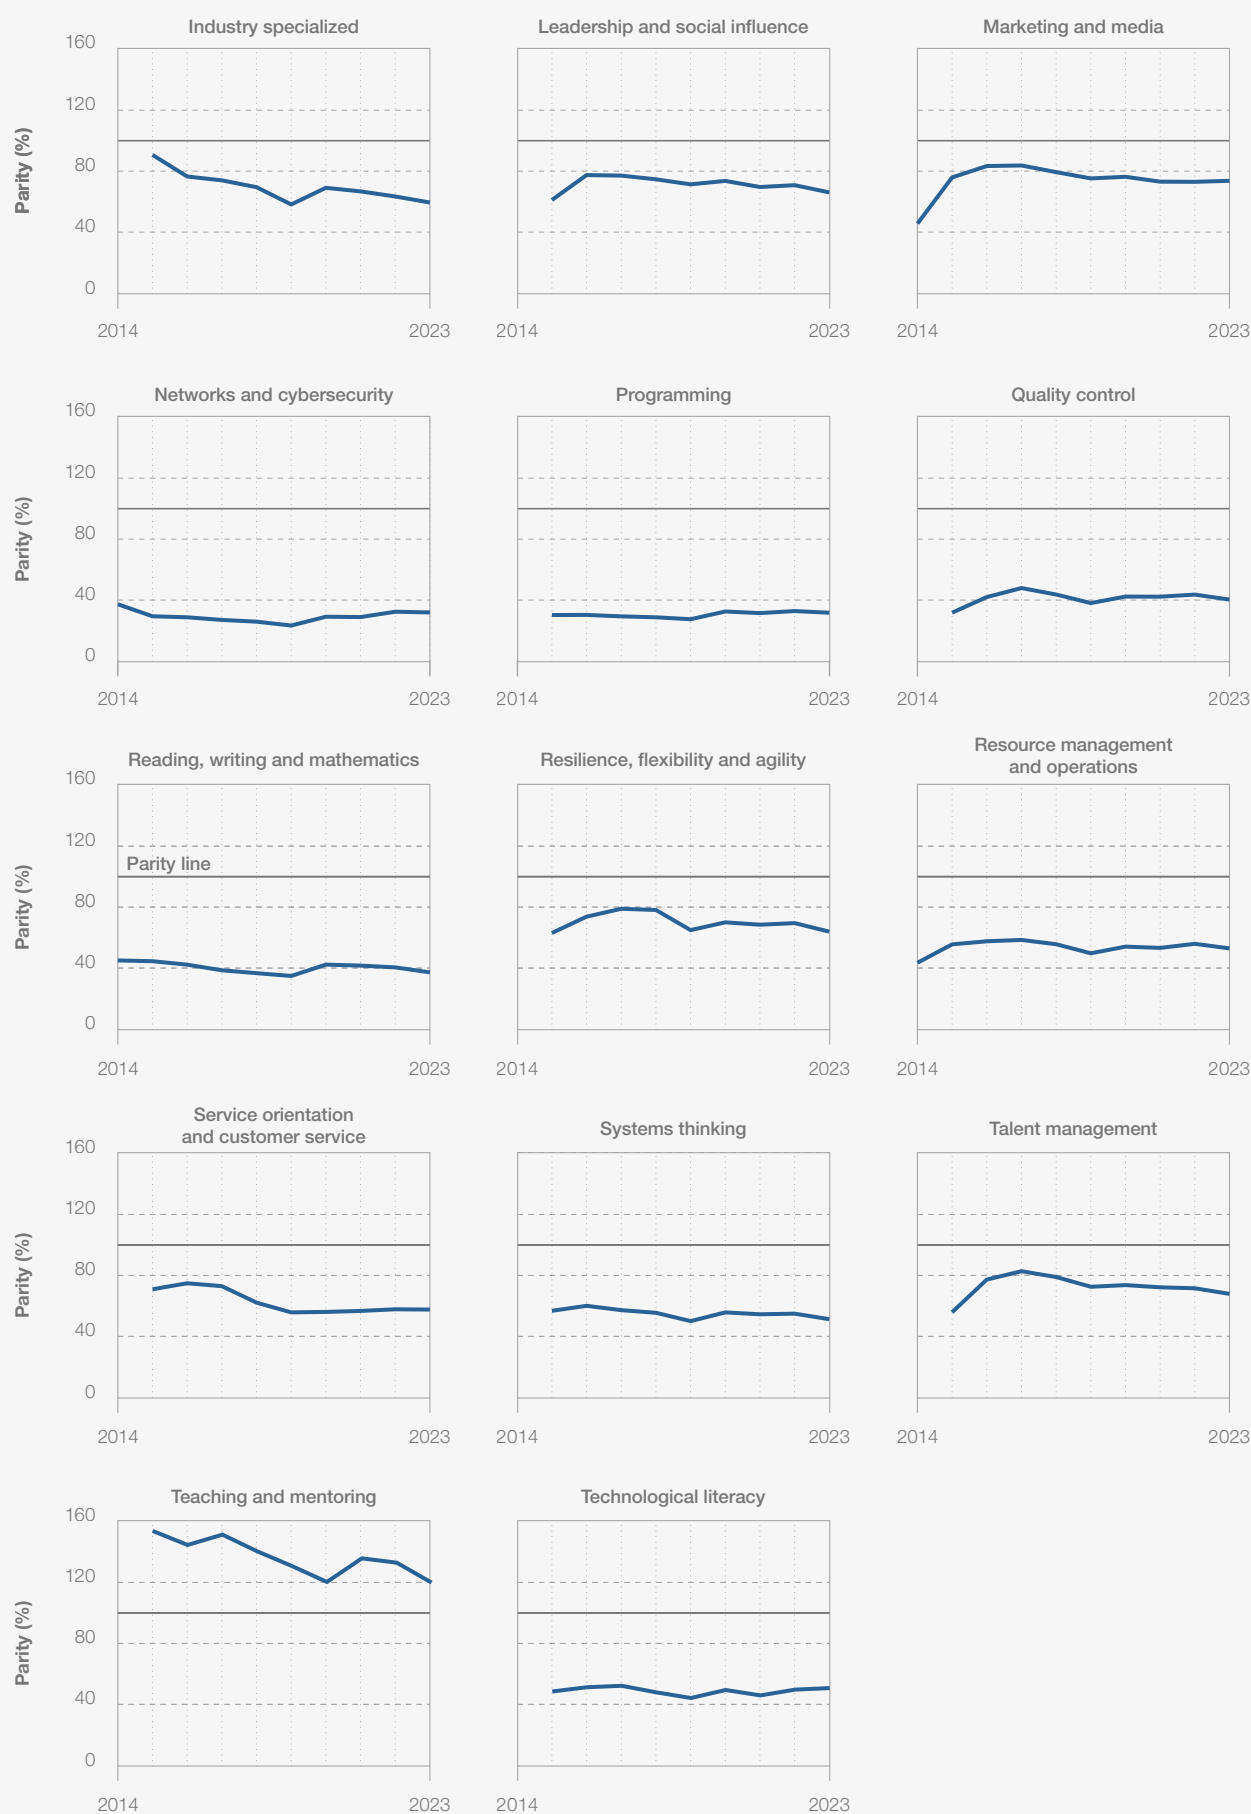

FIGURE 2.20

Gender parity in online course enrolments, by skill

2014-2023

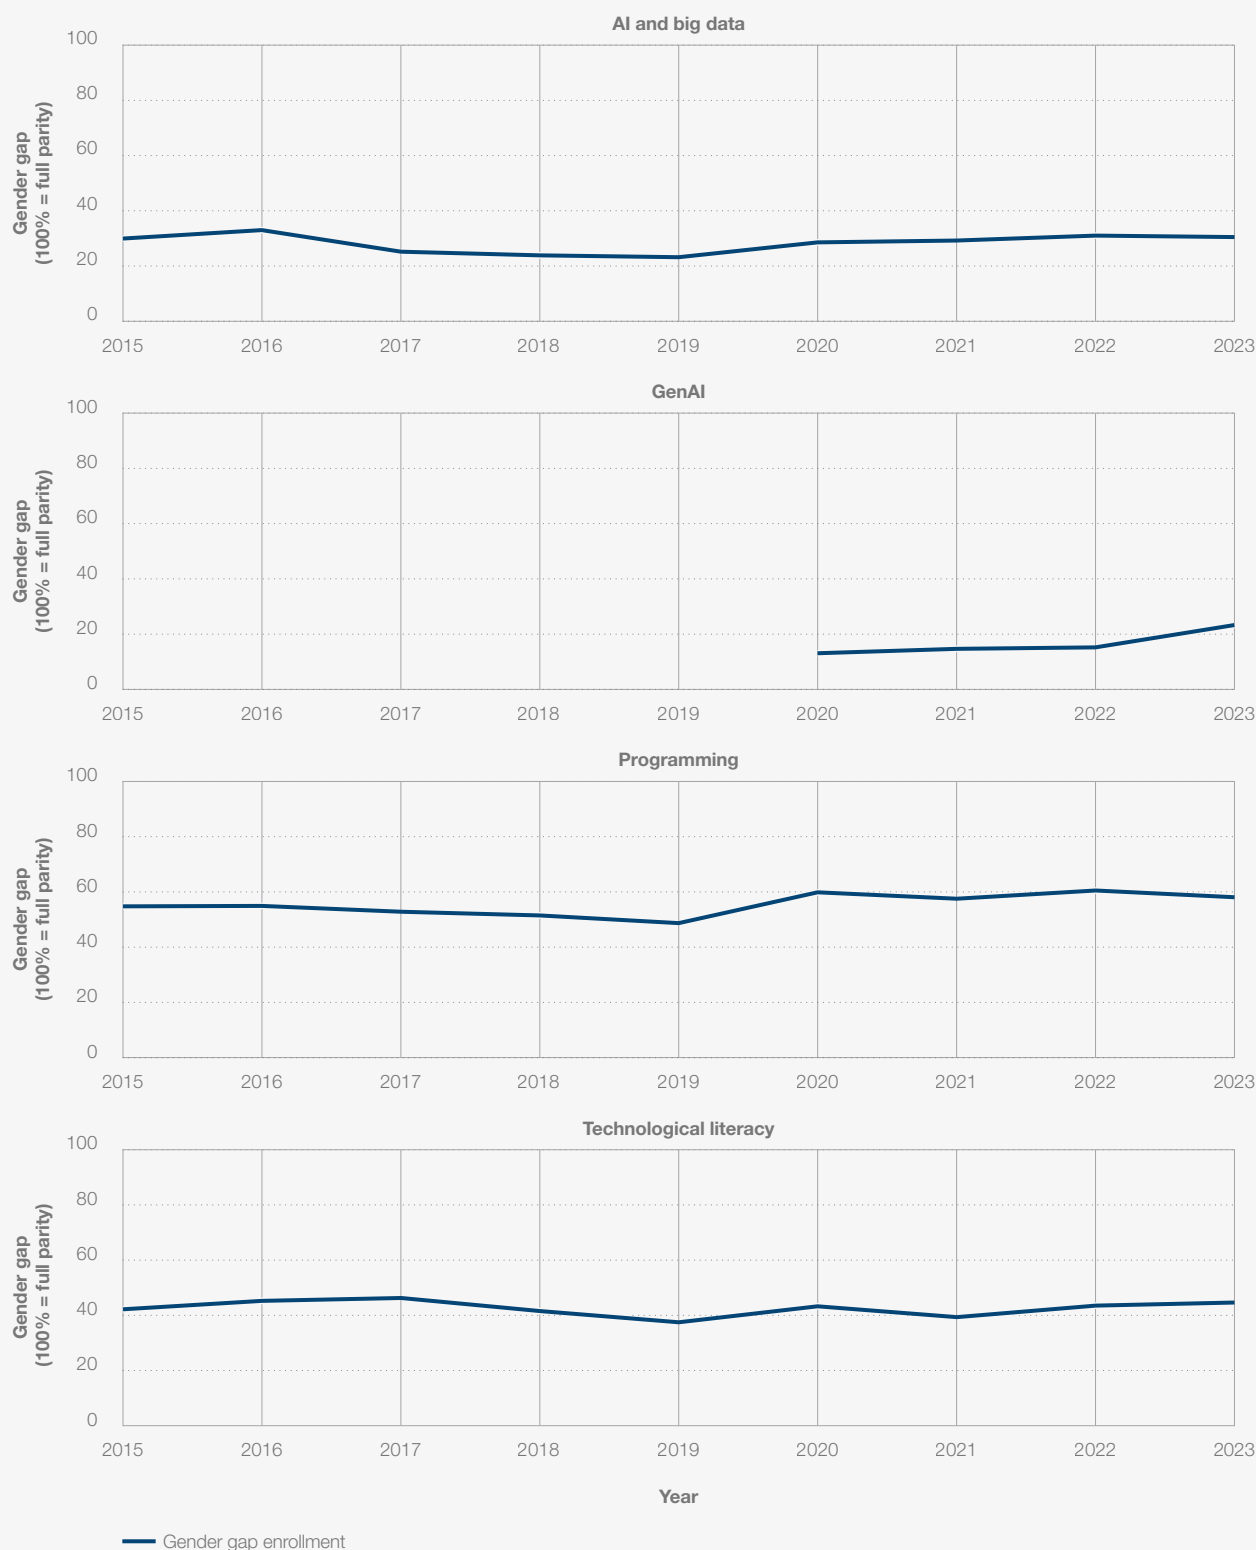

Source
Coursera.

Note
100% = full gender parity.

Conversely, disparities are becoming more pronounced within the sphere of online skilling in AI and digital skills, which are increasingly shaping the overall skills and job landscape. Despite a notable uptick in enrolment in these courses across genders between 2015 and 2023, and since the last report, certain technical proficiencies – notably in AI and big data (30%), programming (31%) and networks and

cybersecurity (31%) – lag in achieving gender parity. These findings underscore the need for targeted interventions to bridge this gap and ensure equitable access to emerging technological competencies, particularly since generative AI is a fast-growing technology with the potential to enable tailored learning experiences fitting the needs of diverse learner populations.

FIGURE 2.21 Gender parity in online AI and digital course enrolments

Source
Coursera.

Perceived skills demand and workforce expectations

Demand for STEM skills in the economy is increasing overall, yet skilling decisions will depend on an employee's current role and employer. They will, to an important extent, depend on skills trajectories for any given role, on prospective benefits from learning new skills and on access to both upskilling and reskilling opportunities. This section considers gender gaps in all three dimensions to contextualize the skilling decisions discussed in the previous section.

A comprehensive, cross-industry workforce survey by PwC in 2023 with close to 54,000 respondents across 46 countries and territories indicates that 74% of male respondents and 69% of female respondents believe their job requires specialized qualifications or training. As illustrated in Figure 2.22, relatively fewer women than men expect the skills

required to do their job to change significantly in the next five years (54% vs 61%) and relatively fewer women than men have a clear sense of how skills required for their current role will change (62% vs 68%).

The survey further reveals that leadership, adaptability and collaboration display almost no gender gaps when it comes to the perceived importance for men's and women's careers (Figure 2.23a). However, given their current roles, the women surveyed judge digital, analytical and green skills as well as specialist technical or trade skills as less important over the next five years of their current career trajectories. The largest gaps in this context exist for technical and trade skills, analytical and data skills, and digital skills. Furthermore, important gender gaps exist across all skills when it comes to the confidence employees have in their employers to provide the necessary tools and opportunities to up- or reskill (Figure 2.23b).

FIGURE 2.22 Gender gap in workforce expectations

Source
PWC Workforce Hopes and Fears Survey, 2023.

These gender gaps in perceived usefulness of a particular skill, given current roles and perceived opportunities to acquire new skills, provide additional important context to realized skilling gaps. The survey data suggests that part of the observed skills gap can be explained by the extent to which women's career trajectories are pointing in the direction of the skills and occupations of the future, and by the extent to which women feel they are easily able to access opportunities to acquire new skills.

While gender parity in Educational Attainment is within close grasp of the global community, it does not yet translate to equitable outcomes in the world of work. As men and women transition from schooling to the workforce, their skillsets continue to be shaped and valued differently – often to the economic disadvantage of women. It is in this space that reskilling can play a key role in valorizing all skills needed in the future of work, and therefore, in incentivizing men and women to participate without gender bias in all types of work.

Appendix A

Regional Classifications

TABLE A.1 Regional classifications of the 146 countries included in the 2024 Global Gender Gap Index¹

The following regional classifications are used for creating the regional performance tables and figures in Chapter 1.

Central Asia	Europe	Northern America
Armenia	Netherlands	Canada
Azerbaijan	Norway	United States of America
Georgia	Poland	
Kazakhstan	Portugal	
Kyrgyz Republic	North Macedonia	
Tajikistan	Romania	
Uzbekistan*	Serbia	
	Slovakia	
	Slovenia	
	Spain	
	Sweden	
	Switzerland	
	Türkiye	
	Ukraine	
	United Kingdom	
Eastern Asia and the Pacific	Latin America and the Caribbean	Southern Asia
Australia	Argentina	Bangladesh
Brunei Darussalam	Barbados	Bhutan
Cambodia	Belize	India
Fiji	Bolivia (Plurinational State of)	Maldives
Indonesia	Brazil	Nepal
Japan	Chile	Pakistan
Lao PDR	Colombia	Sri Lanka
Malaysia	Costa Rica	
Mongolia	Dominican Republic	
New Zealand	Ecuador	
People's Republic of China	El Salvador	
Philippines	Guatemala	
Republic of Korea	Guyana*	
Singapore	Honduras	
Thailand	Jamaica	
Timor-Leste	Mexico	
Vanuatu	Nicaragua	
Viet Nam	Panama	
	Paraguay	
	Peru	
	Suriname	
	Uruguay	
Europe	Middle East and Northern Africa	Sub-Saharan Africa
Albania	Algeria	Angola
Austria	Bahrain	Benin
Belarus	Egypt	Botswana
Belgium	Iran (Islamic Republic of)	Burkina Faso
Bosnia and Herzegovina	Israel	Burundi
Bulgaria	Jordan	Cameroon
Croatia	Kuwait	Cape Verde
Cyprus	Lebanon	Chad
Czechia	Morocco	Comoros
Denmark	Oman	Côte d'Ivoire
Estonia	Qatar	Democratic Republic of the Congo
Finland	Saudi Arabia	Eswatini
France	Sudan*	Ethiopia
Germany	Tunisia	Gambia, Republic of the
Greece	United Arab Emirates	Ghana
Hungary		Guinea
Iceland		Kenya
Ireland		Lesotho
Italy		Liberia
Latvia		Madagascar
Lithuania		Mali
Luxembourg		Mauritius
Malta		Mozambique

Montenegro		Niger
		Nigeria
		Rwanda
		Senegal
		Sierra Leone
		South Africa
		United Republic of Tanzania
		Togo
		Uganda
		Zambia
		Zimbabwe

Note

In the 2024 index, Afghanistan, Malawi, Myanmar and Russian Federation are not covered. * New to index in 2024

Appendix B

Section A: Computation and composition of the Global Gender Gap Index

The methodology of the index has remained stable since its original conception in 2006, providing a basis for robust cross-country and time-series analysis. This year's edition introduces a minor but required update to one indicator in the Economic Participation and Opportunity subindex as well as an updated definition by the collecting institution for one indicator in the Political Empowerment subindex. These changes are detailed in Sections C and D below.

Three underlying concepts

There are three basic concepts underlying the Global Gender Gap Index, forming the basis of how indicators were chosen, how the data is treated and how the scale can be used. First, the index focuses on measuring gaps rather than levels. Second, it captures gaps in outcome variables rather than gaps in input variables. Third, it ranks countries according to gender equality rather than women's empowerment.

Gaps vs. levels

The index is designed to measure gender-based gaps in access to resources and opportunities in countries, rather than the actual levels of the available resources and opportunities in those countries. We do this to disassociate the Global Gender Gap Index from countries' levels of development. In other words, the index is constructed to rank countries on their gender gaps not on their development level. For example, advanced economies, generally speaking, are able to offer more education and health opportunities to all members of society, although this is quite independent of the gender-related gaps that may exist within those higher levels of health or education. The Global Gender Gap Index rewards countries for smaller gaps in access to these resources, regardless of the overall level

of resources. Thus, in the case of education, for example, the index penalizes or rewards countries based on the size of the gap between male and female enrolment rates, but not for the overall levels of education in the country.

Outcomes versus inputs

The second basic concept underlying the Global Gender Gap Index is that it evaluates countries based on outcomes rather than inputs or means. Our aim is to provide a snapshot of where men and women stand with regard to some fundamental outcome indicators related to basic rights such as health, education, economic participation and political empowerment. Indicators related to country specific policies, rights, culture or customs – factors that we consider “input” or “means” indicators – are not included in the index but are discussed further in the analytic sections of this appendix, as well as featured in the report's Economy Profiles. For example, the index includes an indicator comparing the gap between men and women in high-skilled jobs such as legislators, senior officials and managers (an outcome indicator) but does not include data on the length of maternity leave (a policy indicator). This approach has contributed significantly to the index's distinctiveness over the years and, we believe, continues to provide the most objective basis for discussing underlying contextual factors.²

Gender equality vs. women's empowerment

The third distinguishing feature of the Global Gender Gap Index is that it ranks countries according to their proximity to gender equality rather than to women's empowerment. Our aim is to focus on whether the gap between women and men in the chosen indicators has declined, rather than whether women are winning the so-called “battle of the sexes”. Hence, the index rewards countries that reach the point where outcomes for women equal those for men, but it neither rewards nor penalizes cases in which women are outperforming men in particular indicators in some countries. Thus, a country that has higher enrolment for girls rather than boys in secondary school will score equal to a country where boys' and girls' enrolment is the same.

TABLE B.1 | Structure of the Global Gender Gap Index

Subindex	Indicator	Source
Economic Participation and Opportunity	Labour-force participation rate	International Labour Organization (ILO), <i>ILOSTAT</i> database, <i>Labour Force Surveys</i> .
Economic Participation and Opportunity	Wage equality for similar work	World Economic Forum, Executive Opinion Survey (EOS).
Economic Participation and Opportunity	Estimated earned income	International Labour Organization (ILO), <i>ILOSTAT</i> database; UN <i>World Population Prospects 2022</i> ; World Bank, <i>World Development Indicators</i> database.
Economic Participation and Opportunity	Legislators, senior officials and managers	International Labour Organization (ILO), <i>ILOSTAT</i> database.
Economic Participation and Opportunity	Professional and technical workers	International Labour Organization (ILO), <i>ILOSTAT</i> database.
Educational Attainment	Literacy rate	UNESCO, <i>UIS.Stat</i> Education statistics data portal. When not available, data is sourced from United Nations Development Programme, Human Development Reports, most recent year available between 2013 and 2023.
Educational Attainment	Enrolment in primary education	UNESCO, <i>UIS.Stat</i> Education statistics data portal.
Educational Attainment	Enrolment in secondary education	UNESCO, <i>UIS.Stat</i> Education statistics data portal.
Educational Attainment	Enrolment in tertiary education	UNESCO, <i>UIS.Stat</i> Education statistics data portal.
Health and Survival	Sex ratio at birth	World Bank, <i>World Development Indicators</i> database.
Health and Survival	Healthy life expectancy	World Health Organization (WHO), <i>Global Health Observatory</i> database.
Political Empowerment	Women in parliament	Inter-parliamentary Union.
Political Empowerment	Women in ministerial positions	UN Women.
Political Empowerment	Years with female/male head of state (last 50)	World Economic Forum's calculations.

Source

World Economic Forum, Global Gender Gap Index 2024.

The index is focused on assessing gender gaps between women and men across economic, educational, health and political outcomes based on the data available. The Executive Opinion Survey seeks to address additional data gaps by collecting information on differential outcomes based on gender, sexual orientation, religion, ethnic and/or racial background, income level and disability. Further efforts will be required to capture the relationships between these intersecting categories and additional gender identities.

The four subindexes

The Global Gender Gap Index examines the gap between men and women across four fundamental categories (subindexes): Economic Participation and Opportunity, Educational Attainment, Health and Survival, and Political Empowerment. Table B1 displays all four of these subindexes and the 14 indicators that compose them, along with the sources of data used for each.

Economic Participation and Opportunity

This subindex contains three concepts: the participation gap, the remuneration gap and the advancement gap. The participation gap is captured using the difference between women and men in labour-force participation rates. The remuneration gap is captured through a hard data indicator (ratio of estimated female-to-male earned income)³ and a qualitative indicator gathered through the World Economic Forum's annual Executive Opinion Survey (wage equality for similar work)⁴. Finally, the gap between the advancement of women and men is captured through two hard data statistics (the ratio of women to men among legislators, senior officials and managers, and the ratio of women to men among technical and professional workers).

Educational Attainment

This subindex captures the gap between women's and men's current access to education through the enrolment ratios of women to men in primary-, secondary- and tertiary-level education. A longer-term view of the country's ability to educate women and men in equal numbers is captured through the ratio of women's literacy rate to men's literacy rate.

Health and Survival

This subindex provides an overview of the differences between women's and men's health using two indicators. The first is the sex ratio at birth, which aims specifically to capture the phenomenon of "missing women", prevalent in countries with a strong son preference.⁵ Second, we use the gap between women's and men's healthy life expectancy. This measure provides an estimate of the number of years that women and men can expect to live in good health by accounting for the years lost to violence, disease, malnutrition and other factors.

Political Empowerment

This subindex measures the gap between men

and women at the highest level of political decision-making through the ratio of women to men in ministerial positions and the ratio of women to men in parliamentary positions. In addition, the index includes the ratio of women to men in terms of years in executive office (prime minister or president) for the last 50 years. Differences between the participation of women and men at local levels of government are currently not captured. Should such data become available at a globally comparative level in future years, it will be considered for inclusion in the index.

Section B: Construction of the index

The Global Gender Gap Index is constructed using a four-step process, outlined below. Some of the indicators listed in Table B2 require specific standardization or modification to be used in the index. For further information on the indicator-specific calculations, please refer to Section B of this appendix.

Step 1. Convert to ratios:

Initially, all data is converted to female-to-male ratios. For example, a country with 20% of women in ministerial positions is assigned a ratio of 20 women to 80 men, thus a value of 0.25. This is to ensure that the index is capturing gaps between women and men's attainment levels, rather than the levels themselves.

Step 2. Data truncation at parity benchmark:

The ratios obtained above are truncated at the "equality benchmark". For all indicators, except the two health indicators, this equality benchmark is considered to be 1, meaning equal numbers of women and men. In the case of sex ratio at birth, the equality benchmark is set at 0.944,⁶ and in the case of healthy life expectancy the equality benchmark is set at 1.06 to capture that fact that women tend to naturally live longer than men. As such, parity is considered as achieved if, on average, women live five years longer than men.⁷

Truncating the data at the equality benchmarks for each assigns the same score to a country that has reached parity between women and men and one where women have surpassed men. The type of rating scale chosen determines whether the index is rewarding women's empowerment or gender equality.⁸ To capture gender equality, two possible scales were considered. One was a negative-positive scale capturing the size and direction of the gender gap. This scale penalizes either men's advantage over women or women's advantage over men and gives the highest points to absolute equality. The second choice was a one-sided scale that measures how close women are to reaching parity with men but does not reward or penalize countries for having a gender gap in the other direction. We find the one-sided scale more appropriate for our purposes, as it does not

TABLE B.2 | Calculation of weights within each subindex, 2024

Economic Participation and Opportunity

Ratio	Standard deviation	Standard deviation per 1% point change	Weight
Labour-force participation rate, % (females-to-males ratio)	0.160	0.063	0.199
Wage equality for similar work (survey), 1-7 scale (females-to-males ratio)	0.103	0.097	0.310
Estimated earned income, PPP, int.\$ (females-to-males ratio)	0.144	0.069	0.221
Legislators, senior officials and managers, % (females-to-males ratio)	0.214	0.047	0.149
Professional and technical workers, % (females-to-males ratio)	0.262	0.038	0.121

Educational Attainment

Ratio	Standard deviation	Standard deviation per 1% point change	Weight
Literacy rate, % (females-to-males ratio)	0.145	0.069	0.191
Enrolment in primary education, % (females-to-males ratio)	0.060	0.167	0.459
Enrolment in secondary education, % (females-to-males ratio)	0.120	0.083	0.230
Enrolment in tertiary education, % (females-to-males ratio)	0.228	0.044	0.121

Health and Survival

Ratio	Standard deviation	Standard deviation per 1% point change	Weight
Sex ratio at birth, % (females-to-males ratio)	0.010	0.998	0.693
Healthy life expectancy, years (females-to-males ratio)	0.023	0.441	0.307

Political Empowerment

Ratio	Standard deviation	Standard deviation per 1% point change	Weight
Women in parliament, % (females-to-males ratio)	0.166	0.06	0.31
Women in ministerial positions, % (females-to-males ratio)	0.208	0.048	0.247
Years with female head of state (last 50), Share of tenure years (females-to-males ratio)	0.116	0.086	0.443

Note

Population-weighted averages, including the 101 economies featured throughout all the 2006-2024 editions of the Global Gender Gap Index.

reward countries for having exceeded the parity benchmark. However, disparities in either direction are recorded in the Economy Profiles.

Step 3. Calculation of subindex scores:

Each of the four subindexes is computed as the weighted average of the underlying individual indicators. Averaging the different indicators would implicitly give more weight to the measure that exhibits the largest variability or standard deviation. We therefore first normalize the indicators by equalizing their standard deviations. For example, within the Educational Attainment subindex, standard deviations for each of the four indicators are calculated. Then we determine what a 1%-point change would translate to in terms of standard deviations by dividing 0.01 by the

standard deviation for each indicator. These four values are then used as weights to calculate the weighted average of the four indicators. This way of weighting indicators allows us to make sure that each indicator has the same relative impact on the subindex. For example, an indicator with a small variability or standard deviation gets a larger weight within the subindex than an indicator with a larger variability. Therefore, a country with a large gender gap in the first indicator will be more heavily penalized. Another example is the case of the sex ratio at birth indicator (within the Health and Survival subindex): where most countries have a very high sex ratio and the spread of the data is small, the larger weight will penalize more heavily those countries that deviate from this value. Table B2 displays the values of the weights used.⁹

Step 4. Calculation of final scores:

For all subindexes, the highest possible score is 1 (gender parity) and the lowest possible score is 0 (imparity).¹⁰ A simple average of each subindex score is used to calculate the overall Global Gender Gap Index score – a final value that, like subindex scores, ranges between 1 (parity) and 0 (imparity). The parity and imparity benchmarks have remained fixed through report editions to allow for the comparison and relative ranking of countries¹¹ each year, and across time. This allows readers to track individual country progress. Furthermore, the option of roughly interpreting the final index scores as a percentage value that reveals how a country has reduced its gender gap should help make the index more intuitively appealing to readers.¹²

Section C: Indicator definitions and sources

Indicators composing the Global Gender Gap Index

Economic Participation and Opportunity subindex

Labour-force participation rate, %

The labour-force participation rate is the labour force as a percentage of the working-age population. The labour force is the sum of all persons of working age who are employed and those who are actively looking for employment.

Period: 2010 or latest year available.

Source: International Labour Organization (ILO), *ILOSTAT*.

Wage equality for similar work, 1–7 (best)

Response to the World Economic Forum Executive Opinion Survey question, “In your country, for similar work, to what extent are wages for women equal to those of men?” (1 = not at all, significantly below those of men; 7 = fully, equal to those of men).

For the past 44 years, the World Economic Forum’s Executive Opinion Survey (referred to as the Survey) has played a vital role in flagship publications of the World Economic Forum, as well as at other organizations and research institutions. It stands as the most comprehensive and enduring survey of its kind, with responses from over 12,000 business leaders across 121 countries in 2022. The Survey delves into assessing crucial factors that drive economic growth and competitiveness, including aspects of diversity, equity and inclusion. The significance of this survey lies in its ability to offer valuable insights when statistical data is unavailable or is extremely difficult to measure on a global scale. It captures the perspectives of business leaders who are best positioned to assess their operating environment.

Period: Moving average 2022–2023 or most recent year available (no earlier than 2019–2020).

Source: World Economic Forum, Executive Opinion Survey (EOS).

Estimated earned income, int’l \$1,000s

The estimated female earned income is a proxy for how much command women have over a country’s economic resources. For each country, it is computed using female and male shares of the economically active population, the ratio of the female to male wages (both indicators are sourced from the ILO), gross domestic product valued at constant 2017 international dollars (IMF), and female and male shares of population (World Bank). The methodology used to compute this indicator is adapted from the methodology developed by the United Nations Development Programme’s Human Development Report Office for computing the Gender Development Index (UNDP, 2021–2022, pages 6–7).¹³ Female and male wage measures used in the computation of the gender wage ratio correspond to the mean nominal monthly earnings of female and male employees, respectively. In the absence of wage data, a gender wage ratio of 0.75 is used in the computation of the wage bill. ILO’s measure of earning corresponds to the mean of monthly earnings of all employees in nominal terms. The earnings of employees relate to the gross remuneration in cash and in kind paid to employees, as a rule at regular intervals, for time worked or work done together with remuneration for time not worked, such as annual vacation, other type of paid leave or holidays. Earnings exclude employers’ contributions with respect to employees’ social security and pension schemes and also the benefits received by employees under these schemes. Earnings also exclude severance and termination pay. Statistics of earnings relate to the gross remuneration of employees, i.e. the total before any deductions are made by the employer. The measurement period of this indicator corresponds to that of the wage data. In the Economy Profiles, values reported are the estimated average annual earned income per capita in constant 2017 international dollars for women and men, respectively, and the ratio of the two values.

Period: 2023 or most recent year available.

Source: International Labour Organization (ILO), *ILOSTAT*; International Monetary Fund (IMF), *World Economic Outlook*; World Bank, *World Development Indicators*.

Legislators, senior officials and managers, %

Ratio of women to men employed in senior roles, defined by the ILO as those who plan, direct, coordinate and evaluate the overall activities of enterprises, governments and other organizations, or of organizational units within them, and formulate and review their policies, laws, rules and regulations. It corresponds to Major Group 1 of the

International Standard Classification of Occupations (ISCO-08).¹⁴

Period: 2023 or most recent year available.

Source: International Labour Organization (ILO), *ILOSTAT*.

Professional and technical workers, %

Ratio of women to men employed in professional and technical roles, defined by the ILO as those who increase the existing stock of knowledge, apply scientific or artistic concepts and theories or those who perform technical and related tasks that require advanced knowledge and skill. It corresponds to the sum of Major Groups 2 and 3 of the International Standard Classification of Occupations (ISCO-08).

Period: 2023 or most recent year available.

Source: International Labour Organization (ILO), *ILOSTAT*.

Educational Attainment subindex

Literacy rate, %

Percentage of the adult population (women and men over 15 years of age) with the ability to both read and write and make simple arithmetic calculations. For advanced economies for which data was unavailable in the last 10 years, the authors assumed based on older data that the gender gap on literacy rate is closed.

Period: 2023 or most recent year available.

Source: UNESCO, *UIS.Stat* education statistics data portal; when not available, data is sourced from the UNDP *Human Development Reports*, most recent data available.

Enrolment in primary education, %

Percentage of girls and boys in the official primary school age range (Net Enrolment rate in Primary education) who are enrolled in primary education (International Standard Classification of Education [ISCED] 1).¹⁵

Period: 2023 or most recent year available.

Source: UNESCO, *UIS.Stat* education statistics data portal.

Enrolment in secondary education, %

Based on Gross Enrolment Ratio (GER). Measures the percentage of girls and boys enrolled in secondary education, regardless of age, expressed as a percentage of the official school-age population corresponding to secondary education. A high GER generally indicates a high degree of participation, whether the pupils belong to the

official age group or not. A GER value approaching or exceeding 100% indicates that a country is, in principle, able to accommodate all of its school-age population, but it does not indicate the proportion already enrolled. The achievement of a GER of 100% is therefore a necessary but not sufficient condition for enrolling all eligible children in school.

Period: 2023 or most recent year available.

Source: UNESCO, *UIS.Stat* education statistics data portal.

Enrolment in tertiary education, %

Total enrolment in tertiary education (gross rate), regardless of age, expressed as a percentage of the most recent five-year age cohort that has left secondary school. Tertiary education consists of ISCED levels 5 to 8, and gross enrolment data should be examined within the context of a country structure regarding military service as well as propensity of students to seek education abroad.

Period: 2023 or most recent year available.

Source: UNESCO, *UIS.Stat* education statistics data portal.

Health and Survival subindex

Sex ratio at birth, %

Sex ratio at birth refers to male births per female births. The data represents five-year averages.

Period: 2021 or most recent year available.

Source: World Bank, *World Development Indicators* database.

Healthy life expectancy, years

Average number of years that a person of each gender can expect to live in full health, calculated by taking into account years lived in less than full health due to disease and/or injury.

Period: 2019 or most recent year available.

Source: World Health Organization (WHO), *Global Health Observatory* data repository.

Political Empowerment subindex

Women in parliament, %

Percentage of women holding parliamentary seats as a share of total parliamentary seats. In instances where a parliamentary system is bicameral, the figure used is the one for the lower house.

Period: Data as of 1 March 2024.¹⁶

Source: Inter-Parliamentary Union (IPU).

Women in ministerial positions, %

Percentage of women holding ministerial portfolios as a share of total ministry positions in each government. Some overlap between ministers and heads of government that also hold a ministerial portfolio may occur. IPU-UN Women does not provide information for two of the 146 countries (Myanmar and Afghanistan) included in the sample. We consider the share of women holding cabinet positions in these two contexts to be zero.

Period: Data as of 1 January 2024.

Source: UN Women, *Women in Politics 2024*.

Years with female/male head of state (last 50)

The number of years in the past fifty-year period for which a woman has held a post equivalent to an elected head of state or head of government in the country. It takes into account prime ministers and/or presidents. Royalties are not considered.

Period: 1 March 1974 – 1 March 2024.

Source: World Economic Forum's calculations.

Contextual Indicators**General indicators****GDP, current US\$ billions**

Gross domestic product (GDP) at purchaser's prices is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. Data are in current U.S. dollars.

Period: 2022 or most recent year.

Source: World Bank.

GDP per capita, PPP (constant 2017 international \$)

Per capita value for gross domestic product (GDP) expressed in current international dollars converted by purchasing power parity (PPP) conversion factor.

Period: 2022 or most recent year.

Source: World Bank.

Total population, million people

Estimate of the number of people of all ages living in a country, regardless of residency status or citizenship (except for refugees not permanently settled in the country of asylum who are generally considered part of the population of their country of origin).

Period: 2022.

Source: World Bank.

Population sex ratio (female/male), %

Ratio of the number of females (thousands) to males (thousands) in the population of a society. World Bank staff estimates based on age/sex distributions of United Nations Population Division's *World Population Prospects*.

Period: 2022.

Source: World Bank.

Population growth rate, %

Year-on-year percentage change in total population, calculated based on current and previous year. Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship.

Period: 2022.

Source: World Bank.

Work participation & leadership**Gender wage gap**

The gender wage gap is defined as the difference between male and female median wages divided by male median wages. Wages are computed for full-time equivalent dependent employees and are expressed in US\$ using current exchange rates and US\$ Purchasing Power Parity rates (PPPs) for private consumption expenditures as conversion factors. For more details about the computation of wage estimates, refer to <https://data.oecd.org/earnwage/average-wages.htm>.

Period: 2022 or most recent year.

Source: OECD, *Employment* database.

Share of women's membership on boards, %

Share of board members of listed companies that are women. "Board members" refers to all members of the highest decision-making body in the given company, such as the board of directors for a company in a unitary system or the supervisory board in the case of a company in a two-tier system.

Period: 2022.

Source: OECD, *Employment* database.

Firms with female majority ownership, %

Percentage of firms answering, "More than 50%" to the question, "What percentage of the firm is owned by females?". For African countries surveyed in 2009-2011, this indicator is the percentage of companies answering, "Majority are women" or "All women" to the question, "Are the owners of the firm?". For more details refer to: <https://www.enterprisesurveys.org/content/>

dam/enterprisesurveys/documents/methodology/Indicator-Descriptions.pdf.

Period: 2023 or most recent year.

Source: World Bank Enterprise Survey.

Firms with female top managers, %

Percentage of firms in the private sector who have females as top managers. "Top manager" refers to the highest-ranking manager or CEO of the establishment. This person may be the owner if he/she works as the manager of the firm. The results are based on surveys of more than 100,000 private firms.

Period: 2023 or most recent year.

Source: World Bank Enterprise Survey.

Share of workers in informal sector, %

Ratio of employment of women/men in the informal sector to the total employment (irrespective of the informality/formality) of women/ men. Employment in the informal sector refers all persons who, during a given reference period, were employed in at least one informal sector enterprise, irrespective of their status in employment and whether it was their main or a secondary job. An informal sector enterprise is (1) an unincorporated enterprise, (2) a market enterprise (i.e. it sells at least some of the goods or services it produces), and (3) meets at least one of the following criteria: (i) the enterprise is not registered, (ii) the employees of the enterprise are not registered, or (iii) the number of persons engaged on a continuous basis is below a threshold determined by the country.

Period: 2023 or most recent year.

Advancement of women to leadership roles, 1-7 (best)

Response to the survey question, "In your country, to what extent do companies provide women with the same opportunities as men to rise to positions of leadership?" 1=not at all; 7=to a great extent.

Period: 2023 or most recent year.

Source: World Economic Forum, Executive Opinion Survey (EOS).

Labour force, 1 million people (%)

Total number of people (M/F) participating in the labour force. The ratio is the percentage of women participating in the labour force with respect to the total labour force.

Period: 2023 or most recent year.

Source: International Labour Organization (ILO), *ILOSTAT*.

Unemployed adults, % of labour force

Share of the labour force aged 15-64 (M/F) that is without work but available for and seeking employment. Definitions of labour force and unemployment differ by country.

Period: 2023 or most recent year.

Source: International Labour Organization (ILO), *ILOSTAT*.

Share of workers employed part-time, %

The incidence of part-time employment, also known as the part-time employment rate, represents the percentage of employment that is part time. Part-time employment in this table is based on a common definition of less than 35 actual weekly hours worked. It is derived from both the indicator on employment by sex and actual weekly hours worked.

Period: 2023 or most recent year.

Source: International Labour Organization (ILO), *ILOSTAT*.

Proportion of time spent on unpaid domestic and care work, by sex, age and location, %

Monitors the average time men and women spend on unpaid domestic and care work per day. Data is expressed as a proportion of time in a day. Domestic and care work includes food preparation, dishwashing, cleaning and upkeep of a dwelling, laundry, ironing, gardening, caring for pets, shopping, installation, servicing and repair of personal and household goods, childcare, and care of the sick, elderly or disabled household members, among others.

Period: 2020 or most recent year.

Access to finance

Access to financial services

Measures whether women and men have the same legal rights to open a bank account and obtain credit at a formal financial institution. For each case, the OECD numerical scores have been translated as: Equal rights: Women and men have the same rights to open a bank account and obtain credit at a formal financial institution, without legal exceptions regarding some groups of women. Customary, religious and traditional laws or practices do not discriminate against women's above legal rights; Near-equal rights: Women and men have the same rights to open a bank account and obtain credit at a formal financial institution to women and men,

without legal exceptions regarding some groups of women. However, some customary, religious or traditional practices or laws discriminate against women's legal rights; Uneven rights: Women and men have the same rights to open a bank account and obtain credit at a formal financial institution to women and men. However, this does not apply to all groups of women; Restricted rights: Women and men have the same rights to open a bank account at a formal financial institution. However, women do not have the same rights as men to obtain credit; Unequal rights: Women do not have the same rights as men to open a bank account at a formal financial institution.

Period: 2023.

Inheritance for widows & daughters

Measures whether women and men have the same legal rights to inheritance of land and non-land assets. For each case, the OECD numerical scores have been translated as: Equal rights: Widows and daughters enjoy the same rights as widowers and sons to inherit land and non-land assets. This applies to all groups of women. Customary, religious and traditional laws or practices do not discriminate against women's inheritance rights; Near-equal rights: Widows and daughters enjoy the same rights as widowers and sons to inherit land and non-land assets. This applies to all groups of women. However, there are some customary, religious or traditional laws that discriminate against women's inheritance rights; Uneven rights: Widows and daughters enjoy the same rights as widowers and sons to inherit land and non-land assets. However, this does not apply to all groups of women; Restricted rights: Widows or daughters do not enjoy the same rights as widowers and sons to inherit land and/or non-land assets; Unequal rights: Widows and daughters do not enjoy the same rights as widowers and sons to inherit land and/or non-land assets.

Period: 2023.

Source: OECD, *Gender, Institutions and Development Database* (GID-DB).

Access to land assets

Measures whether women and men have the same legal rights and secure access to land assets. For each case, the OECD numerical scores have been translated as: Equal rights: Women and men have the same legal rights and secure access to land assets, without legal exceptions regarding some groups of women. Customary, religious and traditional laws or practices do not discriminate against women's legal rights; Near-equal rights: Women and men have the same legal rights and secure access to land assets, without legal exceptions regarding some groups of women.

However, some customary, religious or traditional practices or laws discriminate against women's legal right; Uneven rights: Women and men have the same legal rights and secure access to land assets. However, this does not apply to all groups of women; Restricted rights: Women and men have the same legal rights to own land assets, but not to use, make decisions and/or use land assets as collateral; Unequal rights: Women do not have the same legal rights as men to own land assets.

Period: 2023.

Source: OECD, *Gender, Institutions and Development Database* (GID-DB).

Access to non-land assets

Measures whether women and men have the same legal rights and secure access to non-land assets. For each case, the OECD numerical scores have been translated as: Equal rights: Women and men have the same legal rights and secure access to non-land assets, without legal exceptions regarding some groups of women. Customary, religious and traditional laws or practices do not discriminate against women's legal rights; Near-equal rights: Women and men have the same legal rights and secure access to non-land assets, without legal exceptions regarding some groups of women. However, some customary, religious or traditional practices or laws discriminate against women's legal right; Uneven rights: Women and men have the same legal rights and secure access to non-land assets. However, this does not apply to all groups of women; Restricted rights: Women and men have the same legal rights to own non-land assets, but not to use, make decisions and/or use land assets as collateral; Unequal rights: Women do not have the same legal rights as men to own non-land assets.

Period: 2023.

Civil and political freedom

Year women received right to vote

Refers to the year in which the right to vote or stand for election on a universal and equal basis was recognized. Where two years are shown, the first refers to the first partial recognition of the right to vote or stand for election.

Period: Data as of 31 March 2024.

Source: Inter-parliamentary Union.

Number of female heads of state to date

The number of terms women have sat in office over the past fifty-year period as head of state or head of government in a country.

Period: Data as of 1 March 2024.
Source: World Economic Forum's calculations.

Access to justice

Measures whether women and men have the same rights to provide testimony in court, hold public or political office in the judiciary and sue. For each case, the OECD numerical scores have been translated as: Equal rights: A woman's testimony holds the same evidentiary weight as a man's in all types of court cases and women have the same rights as men to sue and to hold public or political office in the judiciary. Customary, religious and traditional laws or practices do not discriminate against women's legal right to sue, to provide testimony in court or to be a judge, advocate or other court officer; Near-equal rights: A woman's testimony holds the same evidentiary weight as a man's in all types of court cases and women have the same rights as men to sue and to hold public or political office in the judiciary. Women's testimony carries the same evidentiary weight in customary/religious courts/tribunals. However, some customary, traditional or religious practices or laws discriminate against women's legal right to sue, to provide testimony in court or to be a judge, advocate or other court officer; Uneven rights: A woman's testimony holds the same evidentiary weight as a man's in all types of court cases and women have the same rights as men to sue. However, women do not have the same right as men to hold public or political office in the judiciary; Restricted rights: Women and men have the same rights to sue. However, a woman's testimony does not hold the same evidentiary weight as a man's in all types of court cases; Unequal rights: Women and men do not have the same rights to sue.

Period: 2023.
Source: OECD, *Gender, Institutions and Development Database* (GID-DB).

Freedom of movement

Measures whether women and men have the same rights to apply for national identity cards (if applicable) and passports and travel outside the country. For each case, the OECD numerical scores have been translated as: Equal rights: Women and men have the same rights to apply for national identity cards (if applicable) and passports and to travel outside the country, without legal exceptions regarding some groups of women. Customary, religious and traditional laws or practices do not discriminate against these rights; Near-equal rights: Women and men have the same rights to apply for national identity cards (if applicable) and passports and to travel outside the country, without legal exceptions regarding some groups of women. However, some customary, traditional or religious practices or laws discriminate against these rights; Uneven rights: Women and men have the same rights to apply for national identity cards (if

applicable) and passports and to travel outside the country. However, this does not apply to all groups of women; Unequal rights: Women do not have the same rights as men to apply for national identity cards (if applicable) or passports and to travel outside the country.

Period: 2023.

Election list quotas for women, national (yes/no)

Reports if a country has in place electoral laws specifying quotas for female candidates in national elections to the lower parliamentary house.

Period: Data as of 31 March 2024.
Source: Institute for Democracy and Electoral Assistance (IDEA), *Gender Quotas Database*.

Party membership quotas, voluntary, (yes/no)

Reports if a country has in place voluntary quotas specifying the number of women for political party membership.

Period: Data as of 31 March 2024.
Source: IDEA, *Gender Quotas Database*.

Seats held in upper house, % of total seats

Percentage of women holding seats in the higher house of representatives as a share of total seats. Applies only to bicameral parliamentary systems.

Period: 2024.
Source: Inter-Parliamentary Union (IPU).

Family and care

Unmet family planning

Unmet need for family planning is defined as the percentage of women ages 15-49 who do not want to become pregnant but are not using contraception.

Period: 2021 or latest year available.
Source: UN Population Fund.

Early marriage, %

Percentage of girls aged 15-19 years who are or have ever been married, divorced, widowed or in an informal union.

Period: 2023.
Source: OECD, *Gender, Institutions and Development Database* (GID-DB).

Mean age of women at birth of first child

The mean age of mothers at first child's birth is defined as the average completed year of age of women when their first child is born.

Period: 2021 or most recent year.

Source: United Nations, Department of Economic and Social Affairs, Population Division, *World Population Prospects 2022*.

Right to divorce

Measures whether women and men have the same legal rights to initiate divorce and have the same requirements for divorce or annulment. For each case, the OECD numerical scores have been translated as: Equal rights = Women have the same rights to initiate divorce and the same requirements to finalize divorce or annulment as men, without negative repercussions from their parental authority. This applies to all groups of women. Customary, religious and traditional laws or practices do not discriminate against women's rights regarding divorce or parental authority after divorce; Near equal rights = Women have the same rights to initiate divorce and the same requirements to finalize divorce or annulment as men, without negative repercussions from their parental authority. This applies to all groups of women. However, there are some customary, religious or traditional laws or practices that discriminate against women's rights regarding divorce and/or parental authority after divorce; Uneven rights = Women have the same rights to initiate divorce and the same requirements to finalize divorce or annulment as men, without negative repercussions from their parental authority. However, this does not apply to all groups of women; Restricted rights = Women do not have the same rights over divorce as men: either their rights to initiate divorce and/ or the requirements to finalize divorce or annulment are unequal, or their freedom from parental authority after divorce is restricted; Unequal rights = Women do not have the same rights over divorce as men: their rights to initiate divorce and/or the requirements to finalize divorce or annulment are unequal, and their freedom from parental authority after divorce is restricted.

Period: 2023.

Length of paid parental leave, calendar days

Parental leave refers to leave available equally to parents – regardless of gender – for the purpose of childcare immediately following maternity and paternity leave OR instead of maternity and paternity leave. Where the paid leave period is available only by sex, it is indicated under “female” or “male”. Where the leave period can be shared amongst the parents as they choose, the length of the paid leave period is indicated under “Value”.

Period: 2023.

Health**Prevalence of gender violence in lifetime, % women**

Percentage of ever-partnered women who ever suffered intimate partner physical and/or sexual violence.

Period: 2023.

Source: OECD, *Gender, Institutions and Development Database* (GID-DB).

Births attended by skilled personnel, % live births

Share of live births attended by skilled health personnel to total live births in a given year.

Period: 2021 or most recent year.

Source: World Bank.

Maternal mortality ratio

Number of maternal deaths per 100,000 live births.

Period: 2020.

Source: World Bank.

Total fertility rate, births per woman

Measures the average number of children a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality.

Period: 2021 or most recent year.

Source: World Bank.

Reproductive autonomy

Measures whether the legal framework protects women's reproductive health and rights. For each case, the following scores are assigned: Equal rights = The legal framework protects women's reproductive health and rights in case of unwanted pregnancy, without any justifications; Near-equal rights = The legal framework protects women's reproductive health and rights in case of unwanted pregnancy, but requires justifications; Uneven rights = The legal framework only protects women's reproductive health and rights in case of unwanted pregnancy with some justifications; Restricted rights = The legal framework only protects women's reproductive health and rights in case of unwanted pregnancy with strict justifications; Unequal rights = The legal framework does not protect women's

reproductive health and rights in case of unwanted pregnancy.

Period: 2023.

Section D: Update to Contextual Indicators

Since the last edition of the *Global Gender Gap Report*, the following updates to the contextual indicators included and displayed in the country scorecards have been made by the corresponding custodian organizations.

The International Institute for Democracy and Electoral Assistance (International IDEA) introduced revisions and updates to its *Gender Quotas Database*. Two indicators under the Civil and Political Freedom section of each Economy Profile – gender quotas for the single/lower house and voluntary political party quotas – reflect the most recent values in the IDEA quotas database.

The World Bank released the tenth in a series of annual reports titled *Women Business and the Law 2024*, which included an updated version of the *Women, Business, and the Law 1.0* index and introduced two new indicators through the expanded *Women, Business and the Law 2.0* data set: Safety and Childcare. The most recent values in this data set have been included for the length of parental leave indicator under the Family and care section of each Economy Profile.

Endnotes

1. The regional groupings have been revised in this edition of the report to align with regional groupings in other flagship reports published by the World Economic Forum. Regional scores prior to the current edition have been recalculated accordingly.
2. Hausmann, 2016.
3. Following a methodology originally developed by the United Nations Development Programme (UNDP), the Global Gender Gap Index estimates the average income earned by women, relative to income earned by men, in a calculation that takes into account a country's GDP per capita (US\$), the share of women and men in the labour force, and their mean nominal wages. To account for globally rising income levels, beginning with 2018's edition, the report no longer caps the maximum income per capita value considered in the calculation. This follows UNDP's own adjustment of the methodology and the fact that the \$40,000 cap formerly used in previous editions of the Global Gender Gap Index had increasingly lost some of its ability to discern the level of gender-based income disparities among high-income nations such as the Nordics, the United States and the member states of the Gulf Cooperation Council. For a full overview of the 2016 methodology change, please refer to that report edition's Appendix D.
4. For more information about the Executive Opinion Survey, see Section C.
5. The report utilizes the United Nations Population Division's World Population Prospects as a source for the sex ratio at birth indicator. Previous editions of the report had utilized data from the U.S. Central Intelligence Agency's World Factbook as an alternative data source.
6. This ratio is based on what is considered to be a "normal" sex ratio at birth: 1.06 males for every female born. See Klasen and Wink, 2003.
7. This ratio is based on the standards used in the UNDP's Gender-Related Development Index, which uses 87.5 years as the maximum age for women and 82.5 years as the maximum age for men.
8. A first attempt to calculate the gender gap was made by the World Economic Forum in 2005; see Lopez-Claros and Zahidi, 2005. The 2005 index, which was attempting to capture women's empowerment, used a scale in which the highest score was assigned to the country with the biggest gap in favour of women.
9. As in previous editions of the index, weights derived for the 2006 index were used again this year to allow for comparisons over time. They may be revised in future editions to reflect the evolution of the gender gap over the past decade.
10. Strictly, in the case of the Health and Survival subindex, the highest possible value a country can achieve is 0.9796. However, for purposes of simplicity, we will refer to this value as 1 throughout the chapters and in all tables, figures and Country Profiles.
11. Because of the special equality benchmark value of 0.9796 for the Health and Survival subindex, the equality benchmark for the overall index score is not strictly 1. This value is in fact $(1 + 1 + 1 + 0.9796) / 4 = 0.9949$. However, for purposes of simplicity, we will refer to the overall equality benchmark as 1 throughout the chapters and in all tables, figures and Economy Profiles.
12. Since the indicators in the subindexes are weighted by the standard deviations, the final scores for the subindexes and the overall index are not a pure measure of the gap vis-à-vis the equality benchmark, and therefore cannot be strictly interpreted as percentage values measuring the closure of the gender gap. However, for ease of interpretation and intuitive appeal, we will be using the percentage concept as a rough interpretation of the final scores.
13. UNDP, 2022.
14. International Standard Classification of Occupations (ISCO), <https://www.ilo.org/public/english/bureau/stat/isco/docs/groupdefn08.pdf>
15. International Standard Classification of Education (ISCED), <http://uis.unesco.org/sites/default/files/documents/international-standard-classification-of-education-isced-2011-en.pdf>
16. At the time of data collection, data on the number of women in the single or lower parliamentary chambers was temporarily unavailable on the IPU data portal for four countries: Sudan, Indonesia, Nigeria, and El Salvador. As per IPU notice, this is usually the case when elections have taken place recently and the official results have not yet been published and updated in Parline. For the 2024 index, "n/a" values have been used for these countries.

User's Guide

How to read the Economy Profiles

The Economy Profiles section of the report presents a two-page profile for each of the 146 economies covered by this year's edition. The first page corresponds to the index results, and the second offers a complementary set of contextual indicators and metrics for that economy.

The *Global Gender Gap Report 2024* is complemented by an online dashboard, which provides detailed Economy Profiles of all economies featured in the index, as well as a data tool enabling the reader to explore index results and rankings in depth, and to compare results by economy, region, indicator and subindex. The Global Gender Gap dashboard can be found at <https://www.weforum.org/publications/gender-gap-report-2024/>.

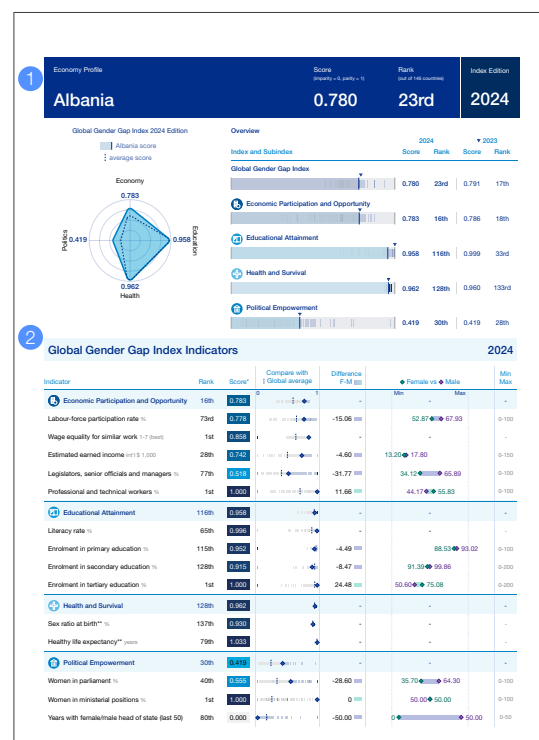

Economy selection

To monitor the state of gender parity across the widest possible range of economies, the index performance for an economy is computed when recent data is available for at least 12 of the 14 indicators composing the index. Obsolescence varies by indicator; while most data points date from the past two years or less, for very few cases, up to 10-year-old data points are used for the calculation. Given the update to the labour-force participation rate data series introduced in 2023, an allowance is made to include data up to 2010 in individual cases for this indicator.

Economy Profiles

Each Economy Profile is divided into three sections:

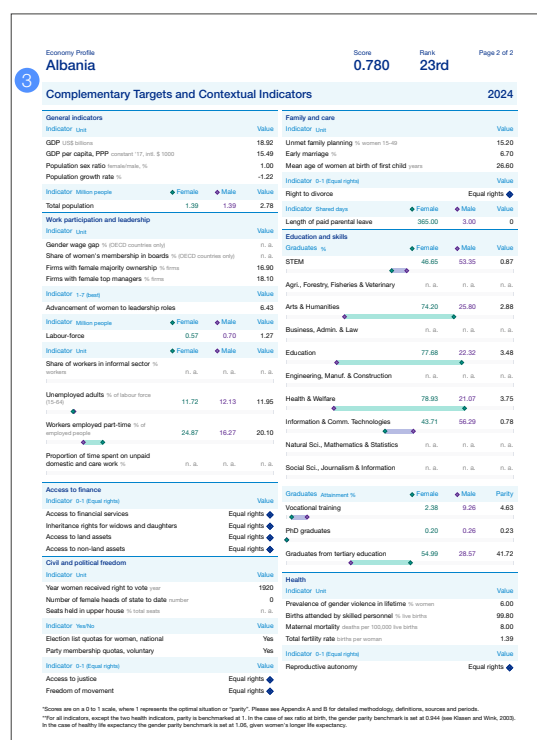

The first section ① presents each economy's overall Global Gender Gap Index rank out of the 146 reviewed countries and its progress, represented on a 0-to-1 scale, towards closing the gender gap and achieving full gender parity (benchmark score of 1). The radar chart on the top left-hand side of each Economy Profile gives an overview of the country's scores for each of the four subindexes relative to the ideal outcome of full gender parity (score of 1) and the global average score of all economies in the index weighted by population across all economies.

The second section ② of each Economy Profile provides an overview of each economy's ranks and scores on the four subindexes of the Global Gender Gap Index, as well as on the individual indicators that compose each subindex. For each of the indicators, column one displays the country's rank; column two displays the country's score; column three locates the country's score against the population-weighted global average for that indicator (out of 146 economies); column four displays the gap between the female and male value; column five charts the female and male value on a scale, respectively; and, finally, column six displays the minimum and maximum value for the indicator. Although full-precision values have been used for calculating ratios and scores, rounded values to one decimal are displayed to facilitate reading. The "n/a" symbol indicates where data is unavailable, and the symbol "-" indicates where the statistic cannot be computed. Economy scores are highlighted by a colour scale – increasing by 20% intervals from light blue (0.0–0.2; worst) to dark blue (0.8–1.0; best) – to help the reader visually interpret the Index results. The female-male values and their gaps are colour-coded – purple for men

and green for women. The gap between them is coloured based on which gender has the higher value. To calculate the index, all ratios are truncated at the parity benchmark of 1 and thus the highest score possible is 1 – except for the sex ratio at birth (0.944) and the healthy life expectancy (1.06) indicators.

The third section ③ of the Economy Profile includes complementary and contextual indicators, which are not incorporated into the calculation of the index but provide relevant information about gender parity in other areas. These indicators are displayed separately because and organized into seven thematic groups: a) General indicators; b) Work participation and leadership; c) Access to finance; d) Civil and political freedom; e) Family and care; f) Education and skills; g) Health. The full definitions of all indicators are provided in Appendix B.

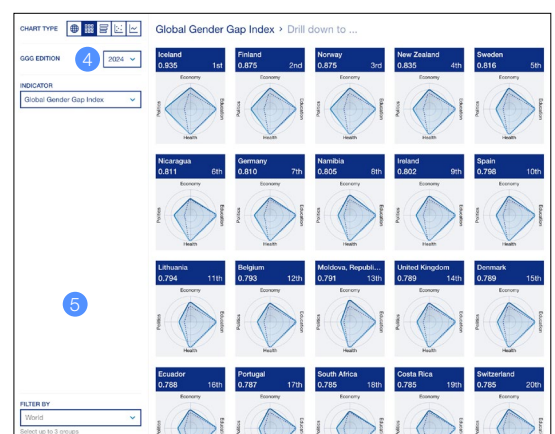

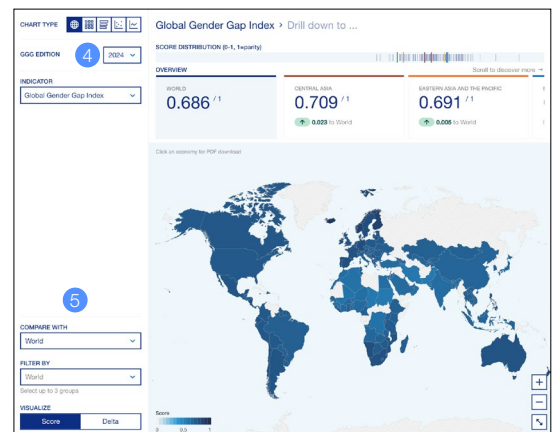

A new interactive dashboard accompanies the release of the 18th edition of the Global Gender Gap Index (available at <http://reports.weforum.org/global-gender-gap-report-2024>). Additional features allow users to explore gender parity scores over time, compare selected indicators and track highlighted economies' performance.

Users can select Gender Gap Index editions by year and can access different chart views of the data by clicking on the corresponding icon option at the top-left corner of the page ④. They can also choose between a world-map view, which allows the reader to explore geographical trends and patterns; a bar-chart view, which depicts an economy's performance for the selected indicator relative to other economies; a scatterplot chart, which visualizes the relationship between two variables; and a line chart, which visualizes the

evolution of gender gap scores by indicator over time. Across views, economies are highlighted by an extended colour scale to enhance contrast and readability – ranging in 20% intervals from light blue (0.0-0.2, worst) to dark blue (0.8-1.0, best).

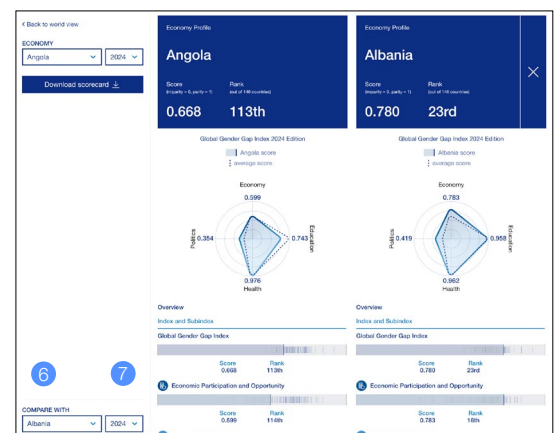

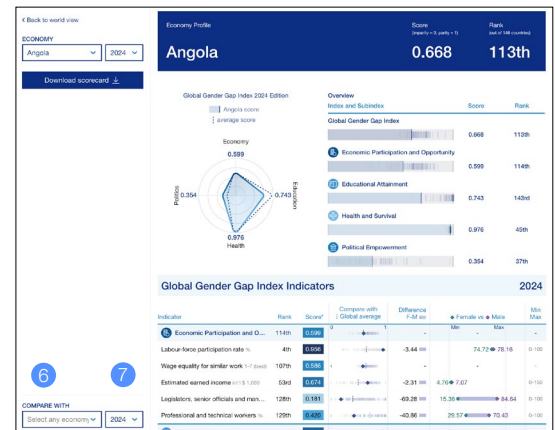

Users can further compare and filter results by economy or by regional grouping by selecting the corresponding option on the drop-down menus situated on the lower-left corner of the dashboard ⑤.

User also have the possibility to directly compare two countries side-by-side and across the time series. The Economy Comparison Tool [6](#) can be accessed by clicking an economy within the charts, and then selecting a second economy from the “compare with” drop-down menu on the bottom left corner of the explorer. This feature enables a side-by-side view of indicators for the selected comparison economy relative to the original economy selected in the Economy Profile view of the Data Explorer. Users may also select the time

period for comparison [7](#). Users may return to the original view by clicking on the Back-to-Economy menu option at the top-left corner of the page or may continue exploring the data by clicking through to the other views of the Data Explorer.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Maternal mortality	deaths per 100,000 live births	7.00
Total fertility rate	births per woman	1.58
Indicator	0-1 (Equal rights)	Value
Reproductive autonomy	Equal rights	◆

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Health

Indicator	Unit	Value
Prevalence of gender violence in lifetime	% women	22.00
Births attended by skilled personnel	% live births	69.00
Maternal mortality	deaths per 100,000 live births	438.00
Total fertility rate	births per woman	4.46
Indicator	0-1 (Equal rights)	Value
Reproductive autonomy	Restricted rights	

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Health

Indicator	Unit	Value
Prevalence of gender violence in lifetime	% women	23.00
Births attended by skilled personnel	% live births	99.80
Maternal mortality	deaths per 100,000 live births	38.00
Total fertility rate	births per woman	2.48
Indicator	0-1 (Equal rights)	Value
Reproductive autonomy	Uneven rights	

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Reproductive autonomy	Restricted rights	◇

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Total fertility rate	births per woman	2.89
Indicator	0-1 (Equal rights)	Value
Reproductive autonomy	Equal rights	◆

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Total fertility rate	births per woman	3.02

Indicator	0-1 (Equal rights)	Value
Reproductive autonomy	Uneven rights	◆

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Reproductive autonomy	Restricted rights			

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Births attended by skilled personnel	% live births	100.00
Maternal mortality	deaths per 100,000 live births	8.00
Total fertility rate	births per woman	1.80

Indicator 0-1 (Equal rights)

Indicator	Unit	Value
Reproductive autonomy		Restricted rights ◇

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or "parity". Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Total fertility rate	births per woman	1.46		

Indicator	0-1 (Equal rights)	Value
Reproductive autonomy	Restricted rights	

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Health

Indicator	Unit	Value		
Prevalence of gender violence in lifetime	% women	28.00		
Births attended by skilled personnel	% live births	80.40		
Maternal mortality	deaths per 100,000 live births	135.00		
Total fertility rate	births per woman	4.31		

Indicator	0-1 (Equal rights)	Value		
Reproductive autonomy		Restricted rights		

*Scores are on a 0 to 1 scale, where 1 represents the optimal situation or “parity”. Please see Appendix A and B for detailed methodology, definitions, sources and periods.

**For all indicators, except the two health indicators, parity is benchmarked at 1. In the case of sex ratio at birth, the gender parity benchmark is set at 0.944 (see Klasen and Wink, 2003). In the case of healthy life expectancy the gender parity benchmark is set at 1.06, given women's longer life expectancy.

Acknowledgements

We are extremely grateful to our colleagues in the Centre for the New Economy and Society for their inputs and support, especially to Mauricio Baez-Sedeno, Attilio Di Battista, Eoin O'Cathasaigh, Julia Hakspiel, Kateryna Karusnka, Ricky Li, Dorsey Lockhart, and Ignacio Moreno.

We are immensely grateful to Professor Ricardo Hausmann, Director of the Growth Lab at Harvard University's Center for International Development; Rafik Hariri, Professor of the Practice of International Political Economy at Harvard Kennedy School; and Professor Laura D'Andrea Tyson, Distinguished Professor of the Graduate School at the Haas School of Business, University of California, Berkeley and Chairperson of the Board of Trustees at UC Berkeley's Blum Center for Developing Economies, for their longstanding guidance and support.

A special thank you to Michael Fisher for his excellent copyediting work and to Accurat for their outstanding graphic designing and layout of the report, as well as for its outstanding work to create the report's Economy Profiles and online dashboard, and Floris Landi and Bianca Gay-Fulconis, for creating the cover.

For more information, please contact cnes@weforum.org.

Collaborations

The Centre for the New Economy and Society aims to empower decision-making among leaders in business and policy by providing fresh, actionable insight through collaboration with leading experts and data-holding companies. We are pleased to have collaborated with LinkedIn and Coursera this year and thank the following contributors:

Coursera

Maria-Nicole Ikonomou, Head of Global Enterprise PR & Communications

Eric Karsten, Senior Data Science Manager

Anna Zhao, Data Scientist II

Shannon Mooney, Senior Data Scientist

LinkedIn

Kristin Keveloh, Senior Lead Manager, Public Policy & Economic Graph Programmes

Silvia Lara, Data Scientist, Economic Graph Team

Matthew Baird, Senior Staff Economist, Economic Graph Team

PwC

Andrea Plasschaert, Director Global Corporate Affairs & Communications

James Morris, Global Director of Corporate Affairs and Advocacy

Centre for the New Economy and Society Business Partners

The World Economic Forum would like to thank the Business Partners of the Centre for the New Economy and Society for their guidance and support.

Partner Institutes

The World Economic Forum's Centre for the New Economy and Society is pleased to acknowledge and thank the following organizations as its valued Partner Institutes, without which the realization of the *Global Gender Gap Report* would not have been feasible:

Albania

Institute for Contemporary Studies & Tirana Business University and College

Helton Cevi, Project Coordinator
Artan Hoxha, President of ISB and Administrator of TBU
Oltjon Valisi, Assistant Project Coordinator

Algeria

Centre de Recherche En Economie Appliquée Pour Le Développement - CREAD

Yacine Belarbi, Director
Khaled Menna, Director of Macroeconomics and Economic Integration

Angola

Jobartis

João Freitas, Country Manager
Luis Verdeja, Director

Argentina

IAE Business School, Universidad Austral

Eduardo Fracchia, Director of Academic Department of Economics
Martin Calveira, Research Economist

Armenia

Economy and Values Research Center

Sevak Hovhannisyanyan, Board Member and Senior Associate

Australia, Belgium, Canada, Indonesia, Italy, Sweden, United Kingdom, United States

Dynata

Thomas Huff, Senior Project Manager
Steffen Bott, Vice President, Sales
Valentyana Chuikina, Associate Account Director

Austria

Austrian Institute of Economic Research - WIFO

Gabriel Felbermayr, Director
Michael Peneder, Project Lead
Alexandros Charos, Survey Expert

Bahamas

The Government and Public Policy Institute, University of the Bahamas

Zhivargo Laing, Executive Director
Jeannie D. Gibson, Policy Assistant

Bahrain

Bahrain Economic Development Board

Khalid Humaidan, Chief Executive
Nada Al-Saeed, Executive Director
Rima AlKilani, Executive Director
Fatema Alatbi, Senior Executive
Sara Ishaq, Senior Executive

Bangladesh

Centre for Policy Dialogue - CPD

Dr Fahmida Khatun, Executive Director
Dr Khondaker Golam Moazzem, Research Director
Ratia Rehnuma, Research Associate
Chowdhury Fariha, Research Intern

Barbados

University of West Indies

Jonathan G. Lashley, Senior Fellow
Don Marshall, Professor
Kenisha Chase, Research Assistant

Benin

Institut de Recherche Empirique en Economie Politique - IREEP

Leonard Wantchekon, President
Stéphanie Houngan, Research Associate

Bolivia (Plurinational State of), Costa Rica, Dominican Republic, El Salvador, Honduras, Panama

INCAE Business School

Ronald Arce, Researcher
Enrique Bolaños, President
Octavio Martínez, Director

Bosnia and Herzegovina

School of Economics and Business, University of Sarajevo

Jasmina Selimovic, Dean
Zlatko Lagumdžija, Professor
Amra Kapo, Associate Professor

Botswana

Botswana National Productivity Centre

Letsogile Batsetswe, Research Consultant and Statistician
Zelda Okatch, Information and Research Services Manager
Christopher Diswai, Executive Director

Brazil**Fundação Dom Cabral**

Carlos Arruda, Professor of Innovation and Competitiveness

Hugo Tadeu, Professor of Innovation

Miguel Costa, Research Assistant

Bulgaria**Center for Economic Development**

Maria Prohaska, Director

Ivalina Simeonova, Project Manager

Cambodia**Nuppun Research and Consulting Co., Ltd**

Pisey Khin, Director
